Source verification, place by place

Every place where the running text of the book reproduces a source, checked one by one against the source's own text · Performance Management: Design, Dilemmas and Solutions · Malmkjaer Press, first edition 2026 · status as of the print-ready edition, 29 October 2026

What this report is

Verification was performed on the Danish source text in October 2026; the English edition is a translation of the same text with the same references and the same section numbering. For each place, the English wording has been spot-checked against the finding (see §Method).

The book was written with AI assistance, and its sources have therefore been checked in several rounds. This report is the last and most concrete of them: every place where the running text reproduces a source — author and year in parentheses or in the sentence — was checked one by one against the source's own text in the book's archive. For each place, this report states what the book rests on the source, what was found in the source — page and quotation where that was possible — and what the check concluded. The order is the book's own, chapter by chapter, so the report can be read alongside the book.

The report covers 864 places. The extraction also found 39 places where the tool had linked an author and a year to the wrong bibliography entry with the same surname and year (for instance "Lazear & Rosen (1981)" to both Lazear's and Rosen's own 1981 articles); these were checked by reading, found to be in order, and are omitted here because they are not references in the book. They remain in the full register.

How to read a row

Section is the section of the book the place occurs in. **Source** is the reference as the book writes it (full reference at the end). **What the book rests on the source** is the check's formulation of the sub-claim the reference has to carry — not the book's wording. **Evidence in the source** is what was found: page and quotation, or what was searched for. **Status** is one of two, with a label where the history matters:

— **Supported** — the source says what the book rests on it. That is a scholarly judgement, not a proof; the evidence is given so the judgement can be checked. **(corrected Oct. 2026)** means the source did not quite carry the formulation the book had; the text was corrected before publication, and the status applies to the printed text. **Via secondary source**: the sub-claim is carried by another source in the archive that cites the primary one. **In substance (left as is)**: three places where the check found a simplification that has been kept after consideration — the reason is given in the evidence column.

— **No archive file** — the source is not held as full text in the archive. The reference is documented bibliographically, and the sub-claim has, where possible, been confirmed through a secondary source.

Key figures: Supported 757 · Supported (corrected Oct. 2026) 60 · No archive file 36 · Supported via secondary source 8 · Supported in substance (left as is, see evidence) 3. 864 in total.

Caveats

Three things should be read alongside this report. First, "supported" is a judgement: two readers may disagree about how much a source carries, and the evidence column is there so that the disagreement can be concrete. Second, the report covers source references in running text — not the book's figures as such; a figure has been checked where it formed part of the place that was read, and figures from source tables have been read on the rendered page in the cases that were noticed, but there is no complete list of every figure with its source and unit. Third, the check was carried out with AI assistance, by the same kind of tool that wrote the text; this is counteracted by tying every judgement to a piece of evidence and by the author having made the decision at each finding — it does not remove the limitation. The method and the earlier rounds are described in the separate method note; the full register (spreadsheet) is available as raw data.

Chapter 1 — Introduction to Performance Management (20 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
	Drucker (1989)	Epigraph verbatim from The New Realities	Earlier T1 check against Google Books p. 214; page image never seen	**No archive file**
1.2.3 Purpose 3: Selection	**Lazear (2000)**	Sorting on productivity empirically documented	p. 1359 "sorting toward more able workers … through the hiring process"	*Supported*
1.3.2 Why Is This a Problem?	**Holmström (1979)**	Theory Box 1.1 key reference	p. 74, 83	*Supported*
1.3.2 Why Is This a Problem?	**Jensen & Meckling (1976)**	Theory Box 1.1 key reference	p. 308	*Supported*
1.3.2 Why Is This a Problem?	**Holmström (1979)**	Participation constraint / reservation utility	p. 76, condition (2)	*Supported*
1.3.2 Why Is This a Problem?	**Milgrom & Roberts (1992)**	Convex cost of effort	p. 218	*Supported*
1.3.2 Why Is This a Problem?	**Holmström & Milgrom (1987)**	Risk premium ∝ variance, intensity, risk aversion	pp. 320–321	*Supported*
1.3.2 Why Is This a Problem?	**Rosen (1986)**	Compensating wage differentials; examples	pp. 641–642; "autonomy" marked as the book's own extension	*Supported*
1.3.2 Why Is This a Problem?	**Holmström (1979)**	Theory Box 1.2 key reference	p. 76	*Supported*
1.3.2 Why Is This a Problem?	**Holmström & Milgrom (1991)**	Pay = reservation + cost of effort + risk premium	p. 29 certainty equivalent	*Supported*
1.3.2 Why Is This a Problem?	**Milgrom & Roberts (1992)**	Theory Box 1.2 key reference	pp. 217–218	*Supported*
1.3.2 Why Is This a Problem?	**Rosen (1986)**	Theory Box 1.2 key reference	pp. 641–642	*Supported*
1.7.4 Fairness and Social Comparison	**Akerlof (1982)**	Gift exchange from anthropology; pay above equilibrium = gift → higher effort	pp. 543–544, 549 (Mauss)	*Supported*
1.7.4 Fairness and Social Comparison	**Akerlof & Yellen (1990)**	(a) "developed this [gift exchange] into the fair wage-effort hypothesis"; (b) compares pay with a fair wage and adjusts effort	(b) p. 255. (a) the source does NOT cite Akerlof 1982 and does not mention gift exchange (0 hits for "gift"; "1982" only Henderson/GM/Stoft); it grounds the hypothesis in equity theory (Adams) and social exchange (Blau/Homans)	**Supported (corrected Oct. 2026)**
1.7.5 Intrinsic Motivation and Crowding Out	**Deci & Ryan (1985)**	SDT: intrinsic motivation; extrinsic incentives can crowd it out	ch. 3, p. 44 ff. (extract supplied by the author)	*Supported*
1.7.5 Intrinsic Motivation and Crowding Out	**Deci & Ryan (2000)**	Same + identification, mastery	p. 234, 236, 252	*Supported*
Further Reading	**Lazear & Gibbs (2015)**	Further Reading: "chapters 1 and 9: an introduction to personnel economics and incentives"	Archive holds only chs. 9–11. 3rd ed.: Introduction (unnumbered) = introduction to personnel economics; ch. 1 = Setting Hiring Standards; ch. 9 = Performance Evaluation; the Part Three introduction = introduction to incentives	**Supported (corrected Oct. 2026)**
Further Reading	**Jensen & Meckling (1976)**	"the foundational paper on agency theory"	abstract p. 305	*Supported*
Further Reading	**Holmström (1979)**	"a classic paper on optimal incentive design"	abstract p. 74	*Supported*
Further Reading	**Armstrong (2006)**	"a practical introduction … from an HR perspective"	title page	*Supported*

Appendix 5.A — More on Compensation Profiles (3 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
The Basic Problem	**Thaler (1981)**	(a) people discount future rewards far more heavily than the interest rate can explain; (b) discounting does not follow a simple exponential function	p. 205: "the discount rates vary systematically across cells and the differences among individuals are much greater than variation in interest rates could possibly explain"; p. 205: "Responses imply that the subjects have a discount function which is non-exponential"; p. 204: "The implicit discount rates drop sharply as the size of the prize or the length of time increases"	*Supported*
Implications for Compensation Design	**Thaler (1981)**	(a) people often have hyperbolic time preferences: disproportionate discounting in the short run, "normal" over longer horizons; (b) the difference between today and tomorrow feels larger than the difference between in a year and in a year and a day	p. 202: "(A.1) One apple today. (A.2) Two apples tomorrow. (B) … (B.1) One apple in one year. (B.2) Two apples in one year plus one day. While some people may be tempted to select (A.1) no one would select (B.1)"; p. 205: "the difference between today and tomorrow will seem greater than the difference between a year from now and a year plus one day. Yet an exponential discount rate requires that these differences be perceived to be equal"	*Supported*

Appendix 5.A — More on Compensation Profiles (3 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
Implications for Compensation Design	**Laibson (1997)**	(a) hyperbolic time preferences: a high discount rate in the short run, a low one in the long run; (b) "show"	p. 445: "Hyperbolic discount functions are characterized by a relatively high discount rate over short horizons and a relatively low discount rate over long horizons"; p. 445: "Research on animal and human behavior has led psychologists to conclude that discount functions are approximately hyperbolic [Ainslie 1992]"; p. 449: "Events in the near future are discounted at a higher implicit discount rate than events in the distant future"	*Supported*

Chapter 6 — Incentive Intensity (26 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
6.1.3 The Principal and the Agent	**Holmström (1979)**	Theory Box 6.1	pp. 74–75	*Supported*
6.2.5 Summary: The Formula for the Optimal β	**Milgrom & Roberts (1992)**	linear model, four factors	ch. 7	*Supported*
6.2.5 Summary: The Formula for the Optimal β	**Holmström & Milgrom (1987)**	linear model	p. 303, 323 eq. 32	*Supported*
6.2.5 Summary: The Formula for the Optimal β	**Milgrom & Roberts (1992)**	risk premium, β*	ch. 7	*Supported*
6.2.5 Summary: The Formula for the Optimal β	**Holmström & Milgrom (1987)**	same	p. 317, 323	*Supported*
6.3 The Informativeness Principle	**Holmström (1979)**	Def. 6.2 + RPE	p. 84, 86	*Supported*
6.3 The Informativeness Principle	**Holmström (1979)**	1979	p. 84	*Supported*
6.3.3 When Is RPE a Good Idea?	**Lazear & Gibbs (2015)**	Example 6.1, two salespeople	ch. 11 (Singapore→Sweden, "Freely adapted from")	*Supported*
6.3.3 When Is RPE a Good Idea?	**Lazear & Gibbs (2015)**	Theory Box 6.3, hawks/doves	ch. 11	*Supported*
6.4.2 Example: Managers and Long-Term Decisions	**Merchant & Van der Stede (2017)**	myopia, Chapters 10–11	note p. 130	*Supported*
6.4.2 Example: Managers and Long-Term Decisions	**Stein (1989)**	"basic agency-theoretic model" for short-term managerial behaviour	Substance p. 655 supported; but p. 662: "The conclusions reached here are in contrast to those derived from an agency-theoretic view of the firm" (DA re-measured) — signal-jamming aimed at the stock market	**Supported (corrected Oct. 2026)**
6.4.2 Example: Managers and Long-Term Decisions	**Narayanan (1985)**	same	pp. 1469–1470	*Supported*
6.4.4 Rat Race: When Everyone Runs Faster	**Lazear & Rosen (1981)**	tournaments effective; too large a spread	p. 844, 848	*Supported*
6.4.4 Rat Race: When Everyone Runs Faster	**Akerlof (1976)**	rat race	p. 600, 603	*Supported*
6.5 The Selection Effect	**Lazear (2000)**	approx. half incentive	p. 1347, 1353	*Supported*
6.5.1 Self-Selection into Incentive Systems	**Berg & Fast (1975)**	(a) Berg does not document selection on risk appetite (the book's own delimitation)	Source line l. 584 'Berg (1975)'; bib BergLincoln1975	*Supported*

Chapter 6 — Incentive Intensity (26 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
6.5.1 Self-Selection into Incentive Systems	**Roberts (2004)**	Lincoln acquisitions	ch. Motivation (sidecar)	*Supported*
6.5.1 Self-Selection into Incentive Systems	**Berg & Fast (1975)**	piece rate, variation	p. 3, 5, 16	*Supported*
6.5.1 Self-Selection into Incentive Systems	**Roberts (2004)**	source line	—	*Supported*
6.7.2 From Model to Field	**Weitzman (1980)**	ratchet, Berliner	p. 302, 303 fn1, 306	*Supported*
6.9 Critical Perspectives: The Limits of Incentives	**Kahneman & Tversky (1979)**	loss aversion; "losses feel about twice as strong" (l. 891)	1979: "losses loom larger than gains" p. 279; the factor ≈2 (λ≈2.25) is Tversky & Kahneman 1991/1992 — "twice"/"2.25" 0 hits in 1979 and Thaler 1999	**Supported (corrected Oct. 2026)**
6.9 Critical Perspectives: The Limits of Incentives	**Thaler (1999)**	mental accounting	p. 185, 187	*Supported*
Further Reading	**Lazear & Gibbs (2015)**	Further Reading, Chapter 10	ch. 10	*Supported*
Further Reading	**Holmström (1979)**	Further Reading	—	*Supported*
Further Reading	**Milgrom & Roberts (1992)**	Further Reading	—	*Supported*
Further Reading	**Lazear (2000)**	Further Reading	p. 1346	*Supported*

Chapter 7 — Motivation (30 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
	Deci et al. (1999)	lab experiment	p. 627, 635	*Supported*
7.1.2 Qualitative Differences	**Deci & Ryan (2000)**	intrinsic motivation → quality…	p. 235, 242	*Supported*
7.2.1 The Classic Experiment	**Deci (1971)**	design	pp. 108–109	*Supported*
7.2.1 The Classic Experiment	**Deci (1971)**	Table 1 figures	Table 1 p. 109 rendered	*Supported*
7.2.1 The Classic Experiment	**Deci (1971)**	historical starting point	p. 110	*Supported*
7.2.2 The Mechanism: Cognitive Evaluation	**Deci & Ryan (1985)**	CET	pp. 628–629	*Supported*
7.2.4 Empirical Evidence	**Deci et al. (1999)**	128 experiments	pp. 635–636, 646	*Supported*
7.2.4 Empirical Evidence	**Deci et al. (1999)**	Table (l. 279) "task-noncontingent": k = 7 for both measures	Figure 1 p. 647: k=7 (free behaviour, d –0.14); Figure 2 p. 648: k=5 (interest, d 0.21) — the figures were read as rendered pages	**Supported (corrected Oct. 2026)**
7.2.4 Empirical Evidence	**Gerhart & Fang (2015)**	34 exp. g=.62 vs 8 non-exp. g=.07; DKR children/students	G&F p. 11, 19; DKR p. 646	*Supported*
7.3 Self-Determination Theory	**Deci & Ryan (2000)**	three needs, continuum	p. 229, 238	*Supported*
7.3.3 Internalisation	**Herzberg et al. (1959)**	two-factor	ch. 12 p. 113	*Supported*
7.3.3 Internalisation	**King (1970)**	five versions	p. 18	*Supported*
7.3.3 Internalisation	**Sachau (2007)**	CIT not a good test	p. 378, 381, 383	*Supported*

Chapter 7 — Motivation (30 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
7.4.1 Implication 1: Be Careful with Incentives for In…	**Mellström & Johannesson (2008)**	Case 7.1: "52 % donated / 30 % / 53 %" (l. 477–479)	the outcome measure is agreeing to a health examination in order to become a donor ("supply of blood donors", p. 852) — DA re-measured	**Supported (corrected Oct. 2026)**
7.4.1 Implication 1: Be Careful with Incentives for In…	**Gneezy et al. (2011)**	reduced permanently	p. 194	*Supported*
7.4.1 Implication 1: Be Careful with Incentives for In…	**Gneezy & Rustichini (2000)**	Case 7.2, all figures	pp. 4–7, Table 1 rendered	*Supported*
7.4.1 Implication 1: Be Careful with Incentives for In…	**Gneezy & Rustichini (2000)**	(a) source line, Case 7.2 'A Fine is a Price' cited as (2000)	The reference list prints (2000a)/(2000b) because of \nocite{*}; four hard-coded prose citations stood as (2000)	**Supported (corrected Oct. 2026)**
7.4.1 Implication 1: Be Careful with Incentives for In…	**Gneezy & Rustichini (2000)**	(a) average in the 10-cent group = 23.07 correct answers	QJE p. 797 Table I: Average 28.4 · 23.07 · 34.7 · 34.1; p. 796 body text the same figures (EN read the rendered page; image audit_reports/gr2000b_tabI-07.png in the EN tree)	**Supported (corrected Oct. 2026)**
7.4.1 Implication 1: Be Careful with Incentives for In…	**Gneezy & Rustichini (2000)**	not monotonic	p. 791	*Supported*
7.4.1 Implication 1: Be Careful with Incentives for In…	**Gneezy & Rustichini (2000)**	Table I + case figures	pp. 795–799	*Supported*

Chapter 12 — Careers and Promotion (75 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
	Peter & Hull (1969)	Epigraph "In a hierarchy every employee tends to rise to his level of incompetence"; Peter and Hull 1969	p. 25: "In a Hierarchy Every Employee Tends to Rise to His Level of Incompetence"; copyright page: "Copyright © 1969 by William Morrow"	*Supported*
12.1 Career-Based Incentives: Basic Concepts	**Lazear & Gibbs (2015)**	Def. 12.1: career-based incentives = long-term, deferred; dual role (Chapter 11)	p. 293: "long-term incentives to advance a worker's career … raises and promotions … a type of incentive scheme"; p. ca. 296: "two important roles for promotions: sorting … and incentives"	*Supported*
12.1.2 Two Roles for Promotions	**Lazear & Gibbs (2015)**	Def. 12.2: sorting vs. incentives; conflict when the best performer ≠ the best in the next job	p. ca. 296: "The sorting and incentive roles will be in conflict if the best performer at one level is not the best performer at the next higher level"	*Supported*
12.1.2 Two Roles for Promotions	**Peter & Hull (1969)**	Peter & Hull (1969) observed: in a hierarchy with promotion for performance, everyone rises to their level of incompetence	p. 25: "So my analysis of hundreds of cases of occupational incompetence led me on to formulate The Peter Principle: In a Hierarchy Every Employee Tends to Rise…"	*Supported*
12.1.2 Two Roles for Promotions	**Benson et al. (2019)**	firms place less weight on sales performance the more responsibility the managerial role entails	p. 2085 (abstract): "placing less weight on sales performance in promotion decisions when managerial roles entail greater responsibility"; p. 2090: "firms where managers supervise large teams place less weight on sales performance"	*Supported*
12.1.2 Two Roles for Promotions	**Benson et al. (2019)**	Source note ("Inspired by … Benson, Li and Shue (2019)")	cf. line 107	*Supported*
12.1.2 Two Roles for Promotions	**Peter & Hull (1969)**	Source note ("Inspired by Peter and Hull (1969)")	cf. line 105	*Supported*
12.2.1 Empirical Patterns	**Lazear & Gibbs (2015)**	"Acme"; eight levels from the first layer of management to the CEO; mean pay plus pay band	p. 293: "In this company, there are eight levels from entry-level management to the CEO … mean level of salary … 5th and 95th percentiles"	*Supported*
12.2.1 Empirical Patterns	**Lazear & Gibbs (2015)**	figure caption: the average jumps follow Table 11.1, p. 294; bands narrow at the bottom, widening upwards; after Figure 11.1	p. 294 (rendered): Figure 11.1 "Pay by Hierarchical Level at Acme" and Table 11.1; p. 293: "relatively tight bands of pay at lower levels, but the bands widen at higher levels"	*Supported*
12.2.1 Empirical Patterns	**Lazear & Gibbs (2015)**	table: without/with promotion by level, pay jumps 18…107…48 %, all 0.0 % / 5.8 %; real pay; level 1 omitted; p. 294	p. 294 (Table 11.1, rendered): Stay –0.4/0.1/0.8/–0.1/0.1/–0.9/0.0; Promotion 5.1/5.6/7.4/8.7/4.5/22.3/14.8; Diff 18/23/47/64/40/107/48; 1–8: 0.0 % / 5.8 %; "% Real Salary Increase"; level 1 Promotion "—"	*Supported*
12.2.2 Why Does Pay Rise So Much?	**Rosen (1981)**	superstar effects explain extreme pay differences (AER 1981)	p. 846: "small differences in talent become magnified in larger earnings differences, with great magnification … near the top"	*Supported*
12.2.2 Why Does Pay Rise So Much?	**Rosen (1982)**	scaling argument: talent filters recursively and imperfectly through the chain of command; economies of scale in management; estimate; skewed distribution; large firms pay more	p. 311: "greater talent filters through the entire firm by a recursive chain of command technology … distributions of reward and firm size are skewed relative to the distribution of abilities"; p. 313: "imperfectly 'clone' themselves"; p. 319: "The empirical estimate of .3 suggests that: (i) management decisions are subject to atmosphere-like scale economies"	*Supported*
12.3 Tournament Theory	**Lazear & Rosen (1981)**	tournament theory developed by Lazear & Rosen (1981); promotion as a tournament for a limited prize	p. 841: "compensation schemes which pay according to an individual's ordinal rank in an organization rather than his output level"	*Supported*
12.3 Tournament Theory	**Lazear & Rosen (1981)**	Definition 12.3 builds on L&R; quotation "On the day that … his salary may triple. It is difficult to argue that his skills have tripled in that 1-day period"	p. 847: "On the day that a given individual is promoted from vice-president to president, his salary may triple. It is difficult to argue that his skills have tripled in that 1-day period"	*Supported*

Chapter 12 — Careers and Promotion (75 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
12.3.1 How Tournaments Create Incentives	**Lazear & Rosen (1981)**	Theory Box 12.2: two participants, P=e+ε, prizes W/L; effort up to marginal gain = marginal cost; the spread grows with noise and with marginal cost (= V); risk-neutral → the same effort as an optimal piece rate; heterogeneous: adverse selection; handicap when abilities are known; sequential elimination tournaments to identify the best	pp. 845–846: "C'(μ) = (W1 – W2)g(0)"; p. 847: "the optimal spread varies directly with V and σ²"; p. 841: "When workers are risk neutral … wages based upon rank induce the same efficient allocation of resources as an incentive reward scheme based on individual output"; p. 841/858: "low-quality workers attempt to contaminate high-quality firms, resulting in adverse selection. However, if ability is known in advance, a competitive handicapping structure exists"; p. 861: "A sequential elimination tournament may be a cost-efficient way to select the best person"	*Supported*
12.3.1 How Tournaments Create Incentives	**Lazear & Rosen (1981)**	Source note: "Rank-Order Tournaments as Optimum Labor Contracts", JPE	p. 841 (title/journal)	*Supported*
12.3.3 Disadvantages of Tournaments	**Lazear (1989)**	sabotage: undermining colleagues instead of one's own performance	p. 562: "competition also discourages cooperation among contestants and can lead to outright sabotage. The larger is the spread … the more important is each of these effects"	*Supported*
12.3.3 Disadvantages of Tournaments	**Lazear (1989)**	reduced cooperation	p. 561: "when workers' rewards are based on relative comparisons, salary compression reduces uncooperative behavior that is detrimental to the firm"	*Supported*
12.3.3 Disadvantages of Tournaments	**Milgrom & Roberts (1988)**	influence activities: energy spent persuading the boss about promotion	p. S154: "Members of organizations spend considerable time, effort, and ingenuity attempting to influence decision makers"; p. S155: "individuals campaign for pay increases, choice job assignments, and promotions"	*Supported*
12.3.3 Disadvantages of Tournaments	**Hvide (2002)**	Extends L&R; contestants choose both effort and risk; "risky-lazy trap": excessive risk plus low effort; remedied by rewarding the outcome closest to a benchmark; explains norms that reward mediocrity	p. 877: "a Lazear-Rosen tournament model where agents can influence both the spread of their output distribution (risk taking) and its mean. The unique equilibrium induces excessive risk taking and a low level of effort"; p. 879: "avoid the risky-lazy 'trap' … agents are ranked according to the relative closeness of their output to a benchmark k"; p. 877: "puzzling workplace norms promoting mediocrity"	*Supported*
12.3.3 Disadvantages of Tournaments	**Lazear (1989)**	source for Perspective Box 12.1 (sabotage; reduce the spread)	p. 562, cf. line 319; p. 561: "some wage compression is efficient"	*Supported*
12.3.3 Disadvantages of Tournaments	**Lazear & Gibbs (2015)**	source for the box: RPE = P_you – P_colleague; two routes to a better evaluation; countermeasures	pp. ca. 300–301: "RPE_A = PM_A – PM_B … an employee can improve the evaluation in two ways. One is to work harder … The other is to sabotage"; "where cooperation is important, the firm should not have such workers compete"; "incentives should be muted when the evaluation distorts multitask incentives"	*Supported*
12.3.3 Disadvantages of Tournaments	**Gregory-Smith & Wright (2019)**	outside the occupation list	pdf p. 9 (DA re-measured): "the probability of exit from the firm is raised substantially by 19 percentage points"; Table 5 internal 0.15 / external 0.24	**Supported (corrected Oct. 2026)**
12.3.3 Disadvantages of Tournaments	**Chan et al. (2022)**	the losers' aggregate incentives fall (weaker promotion prospects, limited pay adjustment); the loss drives the exit	p. 123 (abstract): "NPEs' total incentives decrease following the end of a tournament based on evidence of their reduced future promotion prospects and limited adjustments to their compensation. Consistent with the theory that NPEs leave in response to this loss in incentives"	*Supported*

Chapter 12 — Careers and Promotion (75 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
12.3.3 Disadvantages of Tournaments	**Gregory-Smith & Wright (2019)**	821 CEO successions, FTSE 350; 34.3 % left the same year against 24.3 %; with controls +15–24 %; losers who stay receive higher pay	pdf p. 6: "821 tournament events are identified when there is the succession of a new Chief Executive"; pdf p. 5: "all executive directors of all companies in the FTSE 350 Index"; pdf p. 9: "about one-third (34.3%) leave the company in the same year. This compares with a normal turnover rate of just under a quarter (24.3%)"; pdf pp. 9–10, Table 5: "Marginal effects reported" — Tournament event 0.19, Internal 0.15, External 0.24; text: "raises the probability of exit substantially by 19 percentage points"; pdf p. 2: "The directors who remain receive an increase in their remuneration"	**Supported (corrected Oct. 2026)**
12.3.3 Disadvantages of Tournaments	**Chan et al. (2022)**	The best losers leave; the tournament weeds out the weak and triggers "unintended turnover of high-quality managers"	p. 125: "NPEs who are stronger competitors experience a greater decline in their total incentives and are more likely to leave"; p. 123: "promotion tournaments can weed out low-quality managers, but also cause the unintended turnover of high-quality managers"	*Supported*
12.3.3 Disadvantages of Tournaments	**Cyert & March (1963)**	coalition perspective on organisations	ch. 3, 3.1.1 "Let us view the organization as a coalition"; 3.2.2 bargaining, side payments, mutual control-systems	*Supported*
12.3.3 Disadvantages of Tournaments	**Pfeffer (1981)**	coalition perspective / power	grep -i pfeffer → empty	**No archive file**
12.3.3 Disadvantages of Tournaments	**Chan et al. (2022)**	source for point 1	cf. 361/362	*Supported*
12.3.3 Disadvantages of Tournaments	**Gregory-Smith & Wright (2019)**	source for point 1	cf. 361 (the figures 821/34.3/24.3 and the pay effect confirmed)	*Supported*
12.3.3 Disadvantages of Tournaments	**Cyert & March (1963)**	source for points 2–3 (theoretical extension)	ch. 3, 3.1.1 "Let us view the organization as a coalition"; 3.2.2 bargaining, side payments, mutual control-systems	*Supported*
12.3.3 Disadvantages of Tournaments	**Pfeffer (1981)**	source for points 2–3	—	**No archive file**
12.3.3 Disadvantages of Tournaments	**Milgrom & Roberts (1988)**	source for point 4 (politicisation/influence activities)	p. S175: "when the promotion decision approaches, the amount of politicking increases dramatically"; S178: "influence activities—politicking—in organizations"	*Supported*
12.3.4 Heterogeneity: When Promotion Incentives Lose Th…	**Lazear & Gibbs (2015)**	Perspective Box 12.3: managers may distort feedback (negative to the good, positive to the weak); when promotion incentives are large and evaluations subjective; pp. 308–309	p. 309 (rendered): "giving somewhat negative (or less favorable than deserved) feedback to a good performer may … moving them closer to the threshold … giving more positive feedback than deserved to a poor performer may increase their motivation"; "when promotion incentives are large and evaluations are subjective, supervisors have some incentive to distort the feedback"	*Supported*
12.5.2 Up-or-Out: Promotion or Dismissal	**Lazear & Gibbs (2015)**	reference: the theory of career-based incentives, Chapter 11	ch. 11 "Career-Based Incentives", p. 293 ff.	*Supported*
12.6.1 Lazear's Theory of Deferred Compensation	**Lazear (1979)**	Lazear (1979, 1981) explained that seniority pay can create incentives	p. 1261: "it is preferable to pay workers less than VMP when young and more than VMP when old. By doing so, the 'agency' problem is solved"	*Supported*
12.6.1 Lazear's Theory of Deferred Compensation	**Lazear (1981)**	ditto	p. 606: "it is optimal to construct age-earnings profiles which pay workers less than the value of marginal products (VMP) when they are young and more … when they are old"	*Supported*

Chapter 12 — Careers and Promotion (75 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
12.6.1 Lazear's Theory of Deferred Compensation	**Lazear (1979)**	Theory Box 12.3: paid below productivity early, above it late; the total the same; the threat of dismissal; W<V / W>V; credible commitment; an agreed termination date T at which the whole present value has been paid out; mandatory retirement as a condition	p. 1264: "a payment scheme such that the worker receives less than his marginal product when young and more than his marginal product when old. This implies that there be some date at which the firm is no longer willing to pay the worker his current wage"; p. 1265: "the date such that the present value of the lifetime marginal product equals the present value of the lifetime wage payment … Therefore, mandatory retirement is required"; p. 1267: "The major cost of cheating is the loss of the current job"	*Supported*
12.6.1 Lazear's Theory of Deferred Compensation	**Lazear (1981)**	ditto (credible commitment; steeper profile)	p. 607: "Let g(t) be the probability that the firm defaults on the contract by terminating the worker at t<T"; p. 607: "Steeper profiles increase worker effort while flatter profiles will tend to make firms more honest"	*Supported*
12.6.1 Lazear's Theory of Deferred Compensation	**Lazear (1979)**	Source note: "Why Is There Mandatory Retirement?", JPE	p. 1261 title/journal (JPE 87(6), 1261–1284)	*Supported*
12.6.1 Lazear's Theory of Deferred Compensation	**Lazear (1981)**	Source note: "Agency, Earnings Profiles, Productivity, and Hours Restrictions", AER	p. 606 title/journal (AER 71(4), 606–620)	*Supported*
12.6.1 Lazear's Theory of Deferred Compensation	**Lazear (1979)**	figure caption: early, pay below productivity; late, above; based on Lazear (1979, 1981)	p. 1265: "This worker is receiving an amount less than his VMP for t < t* and an amount greater than his marginal product for t > t*" (Fig. 1)	*Supported*
12.6.1 Lazear's Theory of Deferred Compensation	**Lazear (1981)**	ditto	p. 607 Figure 1 (W(t), V(t), T)	*Supported*
12.7 Career Concerns: Incentives via the Labour Marke…	**Holmström (1999)**	Def. 12.8: career concerns = incentives from the labour market's assessment; implicit, without a contract	p. 170: "Fama's … idea that career concerns induce efficient managerial behaviour"; p. 169: "wage process, by taking unobserved actions that affect today's performance"	*Supported*
12.7.2 Career Concerns over the Life Course	**Holmström (1999)**	Theory Box 12.4: ability η plus effort; Bayesian updating; weakens over time; the young overinvest; "even a risk neutral manager acts as if he is risk averse"; younger managers are perceived as overly risk-averse; human versus financial capital, "beneficial as well as detrimental…"	p. 172: "Early in the process, when there is less information, the market puts more weight on the most recent output observation … Eventually, η is revealed almost completely"; p. 175: "young people will overinvest in labour supply because the returns from building a reputation are highest when the market information is most diffuse"; p. 181: "Even a risk neutral manager acts as if he is risk averse in this example"; p. 178: "managers, particularly the younger ones, are seen as overly risk-averse"; p. 169: "career motives can be beneficial as well as detrimental, depending on how well the two kinds of capital returns are aligned"	*Supported*
12.7.2 Career Concerns over the Life Course	**Holmström (1999)**	source attribution	RES 66(1), 169–182	*Supported*
12.8 Netflix: An Alternative to Traditional Career Sy…	**McCord (2014)**	Quotation: "The best thing you can do for employees—a perk better than foosball or free sushi—is hire only 'A' players to work alongside them."	pdf p. 3: "The best thing you can do for employees—a perk better than foosball or free sushi—is hire only 'A' players to work alongside them."	*Supported*
12.9.2 Principle 2: Separate Sorting and Incentives	**Benson et al. (2026)**	outside the occupation list	The find is BensonLiShue2026 (AER; archive file, 2022 wp p. 1: "women receive substantially lower potential ratings despite receiving higher performance ratings"); the chapter otherwise cites only 2019 (QJE)	**Supported (corrected Oct. 2026)**

Chapter 12 — Careers and Promotion (75 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
Is the Peter Principle Correct?	**Benson et al. (2019)**	empirical support; 131 American companies; the best salespeople most promoted; not the best managers; negative correlation	p. 2085: "Using microdata on the performance of sales workers at 131 firms, we find evidence consistent with the Peter Principle"; p. 2087: "131 different U.S.-based client firms"; p. 2088: "prepromotion sales performance is negatively correlated with postpromotion manager value added"	*Supported*
Is the Peter Principle Correct?	**Lazear (2004)**	Regression to the mean; promotion = evidence that the standard has been met; "a necessary consequence of any promotion rule"; the optimal response: raise the bar, and the more so the larger the transitory component	p. S141: "Being promoted is evidence that a standard has been met. Regression to the mean implies that future ability will be lower, on average … Rather than evidence of a mistake, the Peter principle is a necessary consequence of any promotion rule … firms inflate the promotion criterion … the more important the transitory component is … the larger the amount that the standard is inflated"	*Supported*
Is the Peter Principle Correct?	**Lazear (2004)**	Benson et al. reject Lazear's explanation: "not driven by potential issues arising from mean reversion as in Lazear (2004)"; two readings	Benson et al. p. 2089: "our results are not driven by potential issues arising from mean reversion as in Lazear (2004)"; p. 2085: "suggesting either that firms are making inefficient promotion decisions or that the benefits of promotion-based incentives are great enough to justify the costs of managerial mismatch"	*Supported*
Sources	**Peter & Hull (1969)**	Title "The Peter Principle: Why Things Always Go Wrong" (1969)	The reprint's title page: "The Peter Principle", © 1969 Morrow; the subtitle confirmed via Lazear (2004) p. S142: "the book written by Peter and Hull is entitled The Peter Principle: Why Things Always Go Wrong"	*Supported*
Sources	**Benson et al. (2019)**	source attribution, QJE	QJE 134(4), 2085–2134	*Supported*
Sources	**Lazear (2004)**	source attribution, JPE	JPE 112(S1), S141–S163	*Supported*
Sources	**Lazear & Gibbs (2015)**	pp. 297–298 (Japanese dual ranking); line 1067: the link between pay and rank is not designed but a result of external labour-market pressure; Japanese firms are "much less likely to tie pay directly to hierarchical rank" and less often make large pay jumps; two separate rankings	p. 298 (rendered): "the firm does not explicitly design the hierarchy and set pay levels to optimize incentives. Rather, the incentives from promotion are a side effect of the underlying sorting, labor market pressures on pay, and employee signaling … There is some evidence that this view may be valid … Japanese firms are much less likely to tie pay directly to hierarchical rank, and less likely to offer large raises for promotion … two different ranks. One is for hierarchical position, and the other is for compensation"	*Supported*
Further Reading	**Lazear & Rosen (1981)**	foundational article on tournament theory	p. 841	*Supported*
Further Reading	**Hvide (2002)**	extension of L&R with the participants' own choice of risk	p. 877, cf. line 325	*Supported*
Further Reading	**Holmström (1999)**	the theory of career concerns	pp. 169–170	*Supported*
Further Reading	**Lazear (1979)**	the theory of deferred compensation and seniority pay	p. 1261	*Supported*
Further Reading	**Rosen (1981)**	explanation for extreme pay differences at the top	pp. 845–846: "marked skewness in the associated distributions of income and very large rewards at the top"	*Supported*
Further Reading	**Lazear & Gibbs (2015)**	Chapter 11 textbook presentation	ch. 11 "Career-Based Incentives"	*Supported*
Further Reading	**Peter & Hull (1969)**	classic (satirical) analysis	p. 25 m.fl.; "hierarchiology"	*Supported*
Further Reading	**Benson et al. (2019)**	empirical test of the Peter principle	p. 2085	*Supported*

Chapter 12 — Careers and Promotion (75 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
Further Reading	**McLean & Elkind (2003)**	the Enron scandal and the consequences of the rank-and-yank culture	Annotated extract (Kindle, the author's own copy): "Employees called it 'rank-and-yank'"; "the PRC had more to do with manipulating the system than with honestly evaluating talent"; "Rather than reflecting a true meritocracy, the PRC became a perversion of it"	*Supported*
Further Reading	**McCord (2014)**	description of Netflix's approach	pdf p. 1 ff.	*Supported*
Further Reading	**Welch & Welch (2005)**	GE's CEO develops "differentiation" and 20-70-10 and answers the usual objections	Kindle extract (the author's): "you are never 'too nice' to implement 20-70-10, only too cowardly"; the objections section "REASONS TO HATE DIFFERENTIATION—AND NOT"; "differentiation can be implemented only after such a system is in place"	*Supported*
Further Reading	**Grote (2005)**	the book *Forced Ranking: Making Performance Management Work* (HBS Press 2005) — a practical and critical analysis	The archive's paired file is `Grote_(2002)_Forced_Ranking_Behind_the_Scenes_ARTIKEL_IKKE_BOGEN_Grote2005.pdf` (Across the Board, Dec. 2002) — not the work	**No archive file**
Further Reading	**Gibbons & Murphy (1992)**	interaction between explicit incentives and career concerns	Abstract (JPE 100(3)): "the optimal compensation contract optimizes total incentives: the combination of the implicit incentives from career concerns and the explicit incentives from the compensation contract"	*Supported*
Further Reading	**Chan et al. (2022)**	empirical analysis of losers' reactions and turnover	p. 123	*Supported*
Further Reading	**Gregory-Smith & Wright (2019)**	turnover and pay effects for tournament losers	pdf p. 2: "a sharp increase in the likelihood that directors leave the firm when the tournament ends. The directors who remain receive an increase in their remuneration"	*Supported*
Further Reading	**Milgrom & Roberts (1988)**	the theory of influence activities and politicisation	p. S154	*Supported*
Appendix 12.A: A Coalitional Extension of Tourna…	**Lazear & Rosen (1981)**	tournament theory: reward tied to relative position, not absolute output	p. 841: "pay according to an individual's ordinal rank in an organization rather than his output level"	*Supported*
Appendix 12.A: A Coalitional Extension of Tourna…	**Cyert & March (1963)**	organisations as coalitions with partly conflicting goals, negotiation, slack	ch. 3, 3.1.1 "Let us view the organization as a coalition"; 3.2.2 bargaining, side payments, mutual control-systems	*Supported*
Appendix 12.A: A Coalitional Extension of Tourna…	**Nelson & Winter (1982)**	"organisational truce" (organizational truce)	ch. 5, section 2 "Routine as Truce": "truce between the supervisor and those supervised … the usual amount of work gets done, reprimands and compliments are delivered with the usual frequency"	*Supported*
Appendix 12.A: A Coalitional Extension of Tourna…	**Pfeffer (1981)**	promotion decisions as an occasion to mobilise support and redistribute influence	grep -i pfeffer → empty	**No archive file**

Chapter 13 — Subjective Evaluation (77 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
13.1 Why Subjective Evaluation?	**Baker et al. (1994)**	Def. 13.1: subjective evaluation = the principal's judgement rather than objective, verifiable measures	p. 1125/1131: "subjectively assessed by managers or supervisors who are well placed to observe the subtleties"; "too complex and subtle to be verified by a third party"	*Supported*
13.1 Why Subjective Evaluation?	**Lazear & Gibbs (2015)**	the same definition, source 2	ch. 9, p. 251: "such tasks generally must be evaluated and rewarded using judgment"	*Supported*
13.1.1 When Is Subjective Evaluation Necessary?	**Baker et al. (1994)**	information can be observable without being verifiable (in court)	p. 1131: "too complex and subtle to be verified by a third party and so cannot be the basis of an enforceable contract"	*Supported*

Chapter 13 — Subjective Evaluation (77 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
13.1.1 When Is Subjective Evaluation Necessary?	**Baker et al. (1994)**	Theory Box 13.1: soft measures can provide incentives, but require trust/reputation	p. 1127: "trust between workers and supervisors is essential if subjective performance assessment systems are to be successful"	*Supported*
13.1.2 Advantages of Subjective Evaluation	**Lazear & Gibbs (2015)**	subjectivity reduces gaming: the manager detects it ex post and corrects; the expectation deters	pp. 251–252: "If an employee games the quantitative metrics, the manager may detect this ex post … the employee will be deterred from too aggressively manipulating the numbers"	*Supported*
13.1.2 Advantages of Subjective Evaluation	**Lazear & Gibbs (2015)**	two verbatim quotations on favouritism/discrimination + legal exposure	p. 254: "Subjectivity makes it easier for a manager to discriminate, play favorites, and generally be biased in allocating rewards"; p. 253: "legal liability, since subjectivity makes favoritism and discrimination more likely"	*Supported*
13.2.1 The Four Central Types of Bias	**Levy & Williams (2004)**	L&W on leniency bias and the social context of evaluation	p. 887: "Most practitioners report overwhelming leniency on the part of their raters"; p. 881: "the effects of the social context on the appraisal process"	*Supported*
13.2.1 The Four Central Types of Bias	**Murphy et al. (2019)**	MCH as the point of departure for four types of bias	p. 238: leniency, range restriction, halo; distributional/correlational errors	*Supported*
13.2.1 The Four Central Types of Bias	**Bol (2008)**	The term "centrality bias"	Bol 2008 p. 10: "the agent must believe that the principal will keep his promise"; centrality bias p. 11; favoritism pp. 11–12. Bib pages 1--32 → 1--24.	*Supported*
13.2.1 The Four Central Types of Bias	**Murphy et al. (2019)**	MCH use the term "range restriction"	pp. 238–239 "leniency, range restriction, and halo error"	*Supported*
13.2.1 The Four Central Types of Bias	**Cooper (1981)**	the distinction between illusory and true halo; high correlations may reflect genuine co-variation; only illusory halo is error	p. 220: "there is true halo or partial redundancy among the categories"; p. 222: "Illusory halo is present when observed halo exceeds true halo"	*Supported*
13.2.1 The Four Central Types of Bias	**Cooper (1981)**	source for Def. 13.5	as above	*Supported*
13.2.1 The Four Central Types of Bias	**Fox et al. (1983)**	source for the halo definition (an overall impression colours the dimensions)	p. 289: "a tendency to attend to a global impression of each ratee rather than to carefully distinguish among levels of different performance dimensions"	*Supported*
13.2.1 The Four Central Types of Bias	**Bol (2008)**	source for the favouritism definition	Bol 2008 p. 10: "the agent must believe that the principal will keep his promise"; centrality bias p. 11; favoritism pp. 11–12. Bib pages 1--32 → 1--24.	*Supported*
13.2.1 The Four Central Types of Bias	**Prendergast & Topel (1993)**	source for the favouritism definition	p. 355: "organizational practices such as politicking, favoritism, and compression of wage scales"; p. 359: "bias makes it difficult to distinguish genuinely good performance from favoritism"	*Supported*
13.2.1 The Four Central Types of Bias	**Harris & Schaubroeck (1988)**	meta-analysis: self–supervisor ρ=.35, peer–supervisor ρ=.62; attribution theory as the explanation	p. 43: "relatively high correlation between peer and supervisor ratings (ρ = .62) but only a moderate correlation between self-supervisor (ρ = .35)"; p. 45: "actors … attribute good performance to their own behavior and poor performance to environ[ment]"	*Supported*
13.2.1 The Four Central Types of Bias	**Levy & Williams (2004)**	not a bias taxonomy, but a review of contextual factors: feedback environment, recipient reactions, leader–employee relationship	p. 881: "systematic review … over 300 articles"; p. 881 "ratee reactions", "feedback environment"; p. 892: "Leader–member dyadic issues … LMX"	*Supported*
13.2.1 The Four Central Types of Bias	**Murphy et al. (2019)**	"a comprehensive review of evaluation psychology and rater bias"	ch. 11 pp. 238–252	*Supported*
13.2.2 Consequences of Bias	**Murphy et al. (2019)**	Source for "organizational truce"	p. 260: "strongly motivated to avoid … interpersonal conflicts"; "rating inflation … self-preservation"	*Supported*

Chapter 13 — Subjective Evaluation (77 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
13.2.2 Consequences of Bias	**Nelson & Winter (1982)**	the origin of the concept	ch. 5, section 2 "Routine as Truce": "truce between the supervisor and those supervised … the usual amount of work gets done, reprimands and compliments are delivered with the usual frequency"	*Supported*
13.2.3 Influence Activities: When the Employee Shapes t…	**Milgrom & Roberts (1988)**	Def. 13.7: influence activities consume time/energy; influence costs = distorted decisions/information quality	p. S154: "spend considerable time, effort, and ingenuity attempting to influence decision makers … costly both in degrading the quality of decision making and in diverting the attention and effort"	*Supported*
13.2.3 Influence Activities: When the Employee Shapes t…	**Milgrom & Roberts (1988)**	M&R identify influence activities as a cost of organisational decisions; managerial judgement → investment in shaping that judgement	p. S155: "the sort of activity described as 'buttering up the boss' … they also involve very real costs"	*Supported*
13.2.3 Influence Activities: When the Employee Shapes t…	**Prendergast & Topel (1993)**	social strategies exploit favouritism; the more subjective, the more profitable it is to invest in the relationship	p. 359: "As compensation becomes more sensitive to subjectively measured performance, unproductive rent seeking will rise as workers seek to influence the evaluation process"; p. 360: "bias is the outcome of personal relationships and investments in influence"	*Supported*
13.2.3 Influence Activities: When the Employee Shapes t…	**Milgrom & Roberts (1988)**	twofold consequences: time consumed + distorted information quality	p. S154 (abstract) as at line 393; p. S157: "manipulate the information they develop and provide"	*Supported*
13.3 Rater Motivation and Rater Ability	**Murphy et al. (2019)**	Def. 13.8: rater motivation vs. rater ability	p. 114: raters lacked the ability → raters lack the motivation (Banks & Murphy 1985)	*Supported*
13.3.1 When the Manager Does Not Want to Evaluate Hones…	**Prendergast & Topel (1996)**	Theory Box 13.3: personal preferences; incentive where there are consequences; counterweight (less consequence, more monitoring); over-correction (too little weight on the manager, too much on seniority); main point: the right to favouritism has value, can be "sold", and can strengthen incentives	p. 958: "evaluators act on personal preferences toward subordinates"; p. 959: "firms place too little weight on supervisor appraisals … too much weight to noncorruptible measures such as seniority"; p. 959: "A central theoretical point of the paper, however, is that favoritism generates value for those who exercise it … Then incentives will be enhanced"; p. 968: "Selling the Rights to Exert Bias"; p. 962: seniority "though not subject to bias, is unlikely to be correlated with effort"	*Supported*
13.3.1 When the Manager Does Not Want to Evaluate Hones…	**Prendergast & Topel (1996)**	source attribution, JPE	JPE 104(5), 1996, 958–978	*Supported*
13.4 360-Degree Feedback	**Lazear & Gibbs (2015)**	source for the 360 definition (several sources)	p. 253: "Some firms make use of 360-degree evaluations. This practice involves the subordinates in evaluating and giving feedback to the supervisor"	*Supported*
13.4 360-Degree Feedback	**Scullen et al. (2000)**	dataset includes boss, peers, subordinates and self-assessment	p. 956: "ratings on 3 performance dimensions from 7 raters (2 bosses, 2 peers, 2 subordinates, and self)"	*Supported*
13.4.1 Advantages of 360-Degree Feedback	**Scullen et al. (2000)**	360-degree development ratings; perspective contribution avg. 9 %, 17 % subordinates, 0 for peers	p. 963: "ranging from a low of 0% for peers to a high of 17% for subordinates … the mean perspective-related effect was 9%"; p. 956: "developmental ratings"	*Supported*
13.4.2 Challenges of 360-Degree Feedback	**Lazear & Gibbs (2015)**	L&G sum up "the first challenge" (retaliation, popularity contests) with "can be limited"; many firms use them anyway; they work best with open communication/participation	L&G ch. 9 pp. 253–254 (DA re-measured): retribution + transparent anonymity → "Thus, the effectiveness … can be limited"; popularity contests are not mentioned	**Supported (corrected Oct. 2026)**
13.4.2 Challenges of 360-Degree Feedback	**London & Smither (1995)**	"a theoretical model of the effects" of 360 feedback	p. 803: "this paper develops a model and associated propositions to explain the effects of multi-source feedback"	*Supported*

Chapter 13 — Subjective Evaluation (77 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
13.4.2 Challenges of 360-Degree Feedback	**Bol (2011)**	"an economic model of leniency bias as equilibrium"	2006-WP p. 2 (abstract): "After establishing that the performance ratings are subject to leniency and centrality bias, I examine how the biases and the adjustments affect posterior performance"	*Supported*
13.5.2 Criticism of Forced Distribution	**Cappelli & Tavis (2016)**	GE abandoned the system in 2005, a few years after Welch, because of internal competition/undermined cooperation; the system stems from the US Army up to the Second World War (officer candidates)	pdf p. 5: "in 2005: A few years after Jack Welch left GE, the company quietly backed away from forced ranking because it fostered internal competition and undermined collaboration"; pdf p. 4: "the U.S. Army had devised it, just before entering World War II, to quickly identify a large number of officer candidates"	*Supported*
13.5.2 Criticism of Forced Distribution	**Eichenwald (2012)**	Vanity Fair 2012; employees pointed to stack ranking as the most destructive process	pdf p. 10 (webudskrift): "Every current and former Microsoft employee I interviewed—every one—cited stack ranking as the most destructive process inside of Microsoft"	*Supported*
13.5.2 Criticism of Forced Distribution	**Cappelli & Tavis (2016)**	Adobe first, dropped its annual ratings in 2011, today entirely without grades; Accenture followed shortly after Deloitte in 2015; "both have abolished or modified forced distribution"	C&T (DA re-measured): Adobe "first significant departure from traditional reviews … 2011"; "Deloitte followed in 2015, and Accenture and KPMG made similar announcements" — about appraisals/annual reviews, not forced distribution	**Supported (corrected Oct. 2026)**
13.5.2 Criticism of Forced Distribution	**Cappelli & Tavis (2016)**	Amazon 2016: forced ranking in operation; quotation	pdf p. 10: "forced ranking creates an incentive to push others to the bottom of the heap"	*Supported*
13.5.2 Criticism of Forced Distribution	**Cappelli & Tavis (2016)**	adoption figures (line 616): up to a third of US companies and 60 % of the Fortune 500, early 2000s	pdf p. 5: "by the early 2000s … By some estimates, as many as one-third of U.S. corporations—and 60% of the Fortune 500—had adopted a forced-ranking system"	*Supported*
13.5.2 Criticism of Forced Distribution	**Schleicher et al. (2009)**	approx. 20 % of the Fortune 1000, as cited from Sears & McDermott (2003)	p. 900: "recent estimates are that approximately 20% of Fortune 1000 companies use some form of an FDRS (Sears & McDermott, 2003)"	*Supported*
13.5.2 Criticism of Forced Distribution	**Scullen et al. (2005)**	Simulation (l. 628): about 16 % in the first two years, 2 % in year 6, 1 % in year 10, none after year 20; morale/productivity/earnings "largely outside the scope"	p. 20: "Annual improvement averaged approximately 16% for the first 2 years, but fell quickly to about 2% in year 6 and 1% in year 10. After Year 20, there was no improvement"; p. 3: "(e.g., on morale, productivity, or profitability) are largely outside the scope of this article"	*Supported*
13.6.2 Design Principles for Subjective Evaluation	**Cooper (1981)**	nine methods against halo; broadening the basis for observation is the most effective; none removes the effect entirely	p. 218 (abstract): "Nine methods currently used to reduce illusory halo are reviewed, and it is concluded that increasing the sample of the ratees' current behavior is the most effective method in use; however, all methods probably leave residual illusory halo"	*Supported*
13.7.1 Reneging: The Core Problem of Subjective Evaluat…	**Milgrom & Roberts (1992)**	the reneging problem	p. 186: "The payment of cash rewards is itself sometimes subject to a moral hazard problem of reneging. The party who is supposed to pay the reward may misrepresent the outcome … especially easy when … evaluations will tend to be subjective"	*Supported*
13.7.1 Reneging: The Core Problem of Subjective Evaluat…	**Baker et al. (1994)**	Example 13.2 demonstrates the reneging problem (cf. BGM)	p. 1129: "If the firm has no concern for its reputation, its incentive is to claim that the worker performed poorly and so deserves no bonus"	*Supported*

Chapter 13 — Subjective Evaluation (77 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
13.7.1 Reneging: The Core Problem of Subjective Evaluat…	**Baker et al. (1994)**	Theory Box 13.4: implicit contracts sustained by reputation; the mechanism; works with a long relationship, observable reputation and low discounting; fails with a short horizon	p. 1127: "enforced not by the courts but by the firm's concern for its reputation in the labor market"; p. 1130: "If the firm's discount rate is sufficiently low, then the present value of being trustworthy is large enough"; p. 1143: "increasing the value of the ongoing relationship … decreasing the firm's incentive to renege"	*Supported*
13.7.1 Reneging: The Core Problem of Subjective Evaluat…	**Macneil (1978)**	The term "relational contracts" from the legal literature, in particular Macneil (1978)	No archive file (grep macneil → 0)	**No archive file**
13.7.1 Reneging: The Core Problem of Subjective Evaluat…	**Baker et al. (2002)**	BGM 2002 "made it the core of a formal theory of the firm"	BGM 2002 p. 47 (read): "Williamson [1985, Chapter 3] built on Macneil [1978] to incorporate relational contracts between firms into his framework"	**Supported (corrected Oct. 2026)**
13.7.1 Reneging: The Core Problem of Subjective Evaluat…	**Baker et al. (1994)**	source attribution, QJE	QJE 109(4), 1994, 1125–1156	*Supported*
13.8.2 The Perverse Incentive	**Prendergast & Topel (1996)**	favouritism and distortion of evaluations	p. 958: "Subjectivity opens the door to favoritism, where evaluators act on personal preferences toward subordinates"	*Supported*
13.8.3 The Other Side: Accountability, Fairness, and Tr…	**Heslin & Latham (2004)**	quasi-experiment; managers receiving upward feedback rated significantly higher after 6 months vs. baseline and comparison group; moderated by self-efficacy; quotation p. 31	p. 23: "quasi-experimental study … significantly higher six months later, compared to both initial performance and subordinate ratings of a comparison group. Self-efficacy moderated this finding"; p. 31: "managers with low self-efficacy ineffectively use this information"	*Supported*
13.8.3 The Other Side: Accountability, Fairness, and Tr…	**Baker et al. (1994)**	BGM identify credibility/trust as decisive	p. 1127 (see line 92)	*Supported*
13.8.3 The Other Side: Accountability, Fairness, and Tr…	**Leventhal (1980)**	(a) the Leventhal criteria = criteria for procedural justice	kap10:181–186 Table tab:leventhal 'Leventhal's six criteria for procedural justice'; bib Leventhal1980; archive Leventhal_(1980)	*Supported*
13.8.4 Trust versus Control: The PM System's Fundamenta…	**Ouchi (1979)**	the choice between behaviour control and output control	p. 844: "Thus we have a choice of either behavior control or of output control"	*Supported*
13.8.4 Trust versus Control: The PM System's Fundamenta…	**Ouchi (1980)**	clan control; effective only when goal incongruence is low and performance ambiguity high	p. 129: "clans, which are efficient when goal incongruence is low and performance ambiguity is high"	*Supported*
13.8.4 Trust versus Control: The PM System's Fundamenta…	**Ouchi (1979)**	Socialisation "effectively eliminates goal incongruence"	p. 833: "clans rely upon a relatively complete socialization process which effectively eliminates goal incongruence between individuals"	*Supported*
13.8.4 Trust versus Control: The PM System's Fundamenta…	**Baker et al. (1994)**	the reneging problem	p. 1127: "an implicit contract cannot [be enforced by a court], and so is vulnerable to reneging by the firm"	*Supported*
13.8.4 Trust versus Control: The PM System's Fundamenta…	**Bol (2008)**	Bol summarises: subjective contracts require the agent to believe the principal's promise	Bol 2008 p. 10: "the agent must believe that the principal will keep his promise"; centrality bias p. 11; favoritism pp. 11–12. Bib pages 1--32 → 1--24.	*Supported*
13.8.4 Trust versus Control: The PM System's Fundamenta…	**Prendergast & Topel (1993)**	without trust it is rational not to rely on the principal's assessment	p. 355: "if a principal is known to honestly reveal his measure of an agent's performance, implicit contracts are effectively explicit"; p. 359: bias "will typically reduce incentives for effort"	*Supported*

Chapter 13 — Subjective Evaluation (77 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
13.8.4 Trust versus Control: The PM System's Fundamenta…	**Frey & Jegen (2001)**	control crowds out intrinsic motivation; contingent on the relationship: impersonal → positive effect, personalised → reduced effort, because competence is not acknowledged	section 3.3.1 (Labour supply): "a rather impersonal relationship so that … a positive influence of monitoring on managers' performance is expected"; "personalized relationship … monitoring in this case tends to reduce the agents' effort … the agents perceive that their competence is not acknowledged by their superior"	*Supported*
13.8.4 Trust versus Control: The PM System's Fundamenta…	**Ouchi (1980)**	clan control = shared expectations and mutual trust	p. 135: "What form of mediation succeeds by minimizing goal incongruence and tolerating high levels of ambiguity in performance evaluation? Clearly, it is one which …" (the clan)	*Supported*
Arguments for Abolition	**Scullen et al. (2000)**	the idiosyncratic rater effect explains more than half of the variation	p. 956: "idiosyncratic rater effects (62% and 53%) accounted for over half of the rating variance in both data sets"	*Supported*
Arguments against Abolition	**Cappelli & Tavis (2016)**	Deloitte "has backpedaled …" (quotation); the "numberless" firms were, by 2016, reintroducing ratings	pdf p. 10: "Deloitte has backpedaled from giving no ratings at all to having project leads and managers assign them in four categories on a quarterly basis"; same page: Medtronic "is resurrecting them"; PwC "made a similar move"	*Supported*
Sources	**Buckingham & Goodall (2015)**	HBR article; 2 million hours (l. 886); dropped the annual process, cascading goals, 360 tools; two quotations	pdf p. 4: "consumed close to 2 million hours a year"; pdf p. 3: "no cascading objectives, no once-a-year reviews, and no 360-degree-feedback tools"; pdf p. 7: "it bears no resemblance, in generation or in use, to the ratings of the past"; "it's the fact that there is a single number"	*Supported*
Sources	**Rock et al. (2014)**	title/venue	pdf p. 1: "Kill your performance ratings … s+b … 2014" (strategy+business, Issue 76)	*Supported*
Sources	**Cappelli & Tavis (2016)**	title/venue	HBR, Oct. 2016	*Supported*
Discussion Questions	**Baker et al. (1994)**	subjective evaluation depends on reputation	p. 1127 (see 742)	*Supported*
Further Reading	**Baker et al. (1994)**	"the classic article on implicit contracts and reputation"	p. 1127: "implicit contracts based on subjective performance assessments be enforced … by the firm's concern for its reputation"	*Supported*
Further Reading	**Prendergast & Topel (1996)**	"a theory of supervisor bias"	p. 958 (abstract)	*Supported*
Further Reading	**Murphy et al. (2019)**	book title/characterisation	Archive file: SAGE 2019, eISBN 978-1-5063-5288-6, 397 pages	*Supported*
Further Reading	**Levy & Williams (2004)**	"a review of contextual factors in evaluation"	p. 881 (see 337)	*Supported*
Further Reading	**Bol (2008)**	"a research review of subjectivity in compensation contracting"	Bol 2008 p. 10: "the agent must believe that the principal will keep his promise"; centrality bias p. 11; favoritism pp. 11–12. Bib pages 1--32 → 1--24.	*Supported*
Further Reading	**Schleicher et al. (2009)**	"research on reactions to forced distribution"	p. 899: "Two experiments examined raters' reactions to a forced distribution rating system (FDRS)"	*Supported*
Further Reading	**Lazear & Gibbs (2015)**	Chapter 9 = textbook presentation of subjective evaluation	ch. 9 "Performance Evaluation", section "Subjective Evaluation" (p. 251 ff.)	*Supported*
Further Reading	**Scullen et al. (2000)**	"the central article on the idiosyncratic rater effect", JAP	JAP 85(6), 956–970	*Supported*
Further Reading	**Heslin & Latham (2004)**	"evidence that upward feedback changes managerial behaviour", AP:IR	p. 23 (abstract)	*Supported*

Chapter 13 — Subjective Evaluation (77 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
Further Reading	**Colquitt et al. (2001)**	Meta-analysis of voice, procedural and distributive justice; (l. 809) process control β=.03 "not practically significant", Leventhal β=.30, interpersonal β=.26, controlled for distributive	Results section (ca. p. 432): "only two operationalizations had strong unique effects: Leventhal criteria (β=.30) and interpersonal justice (β= .26). Although statistically significant, the unique effects of process control (β=.03) … were not practically significant"; distributive justice entered first (β=.57)	*Supported*
Further Reading	**Gibbs et al. (2004)**	(l. 819) subjectivity × pay satisfaction/performance more positive with longer tenure; tenure = proxy for trust, because there is no direct measure	p. 409 (abstract): "effects of subjective bonuses on pay satisfaction, productivity, and profitability are larger the greater the manager's tenure, consistent with … greater trust"; methods section: "We do not have a direct measure of the degree of trust … To proxy for trust, we use the number of years the department manager has been at the dealership"	*Supported*
Further Reading	**Ouchi (1980)**	1980 sets out the efficiency conditions; 1979 develops behaviour/output control; the clan concept in both	1980 p. 129 (see 817); 1979 p. 844 (see 815); 1979 p. 833 "clans"	*Supported*

Chapter 14 — Feedback and Development (40 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
	Kluger & DeNisi (1996)	Epigraph: "in over one third of the cases [feedback interventions] reduced performance"	p. 275: "we demonstrated a large variability of FI effects such that in over one third of the cases FIs reduced performance"	*Supported*
14.1 The Paradox of Feedback	**Kluger & DeNisi (1996)**	Definition of FI, p. 255: "actions taken by (an) external agent(s) to provide information regarding some aspect(s) of one's task performance"	p. 255: "FIs defined as actions taken by (an) external agent (s) to provide information regarding some aspect (s) of one's task performance"	*Supported*
14.1.1 The Surprising Finding: Feedback Does Not Always…	**Kluger & DeNisi (1996)**	607 effect sizes, 131 studies, 23.663 observations; d = 0.41; >1/3 (38 %) negative; variation not sampling error	p. 254: "607 effect sizes; 23,663 observations ... d = .41 ... over 1/3 of the FIs decreased performance"; p. 258: "Of the usable 131 papers ... over 38% of the effects were negative"; p. 275: "Most of the observed variability cannot be explained by sampling or other errors"	*Supported*
14.1.1 The Surprising Finding: Feedback Does Not Always…	**Steelman et al. (2004)**	The feedback environment "was redefined and operationalised by Steelman, Levy and Snell (2004), who developed the Feedback Environment Scale"	p. 166 (DA re-measured): "the feedback environment has been defined as … (Herold & Parsons, 1985)"; "it bears almost no resemblance to previous definitions"	**Supported (corrected Oct. 2026)**
14.1.1 The Surprising Finding: Feedback Does Not Always…	**Kluger & DeNisi (1996)**	FIT: three levels (task-learning, task-motivation, meta-task/self); self-directed attention reduces performance	p. 262: "three levels of linked processes ... meta-task processes involving the self, task-motivation processes ... and task-learning processes"; p. 275: "FI cues that seem to direct attention to meta-task processes attenuate FI effects ... task-motivation or task-learning processes augment FI effects"	*Supported*
14.1.2 Why Feedback Can Fail	**Murphy et al. (2019)**	Ch. 10: "death spiral"; employees rate their own performance higher than their managers do; even accurate feedback is experienced as unfair; lose-lose	p. 226 death spiral; p. 227 "disappointed with the evaluations and the feedback"; p. 289 "feedback is not always accepted, even if it is completely accurate"	*Supported*
14.1.2 Why Feedback Can Fail	**Murphy et al. (2019)**	Source note "ch. 10, pp. 226–228"	ch. 10, pp. 226–228 confirmed	*Supported*

Chapter 14 — Feedback and Development (40 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
14.2.1 Feedback about the Task, Not the Person	**Kluger & DeNisi (1996)**	main rule: task-focused improves, self-focused reduces	p. 275: "several FI cues that seem to direct attention to meta-task processes attenuate FI effects on performance, whereas ... task-motivation or task-learning processes augment FI effects"	*Supported*
14.2.5 Balanced Positive and Negative	**Kluger & DeNisi (1996)**	sign not a significant moderator; praise weakened the effect; praise shifts attention to the self	p. 275: "both the attenuating effect of praise and the nonsignificant effect of an FI sign"; p. 273: "praise, FIs threatening self-esteem, and verbal FIs attenuate FI effects"; p. 275: "praise ... postulated to increase attention to meta-task processes"	*Supported*
14.3 Feedforward: An Alternative to Feedback	**Kluger & Nir (2010)**	feedforward builds on appreciative inquiry; focus on what works rather than what fails	p. 235: "On the basis of Appreciative Inquiry (Cooperrider & Srivastva, 1987), we offer an interview protocol termed Feedforward Interview"; p. 236: "build organizations around what works, instead of focusing on fixing what's wrong"	*Supported*
14.3.1 The Feedforward Interview (FFI)	**Kluger & Nir (2010)**	FFI developed as a structured alternative to the PA conversation; three steps (success story, conditions, future); quotation "may either be elaborated ... ponder privately"; no action plan required	p. 235: "FFI may be used as a complement, or even as a replacement, for performance appraisal reviews"; p. 237, Table 1: "Step 1 – Eliciting a success story ... Step 2 – Discovering your personal success code ... [feedforward question]"; p. 237: "may either be elaborated and discussed in detail or left as a question for the interviewee to ponder privately"	*Supported*
14.3.1 The Feedforward Interview (FFI)	**Budworth et al. (2015)**	first controlled field experiment, FFI vs. PA; 25 managers, Canadian company, random allocation; 13 managers/70 employees FFI; 12/75 PA; peer-ratings 4 months later; 3.30 (SD 0.32) vs. 3.14 (SD 0.42); F = 8.26, p < 0.001; d = 0.41; 2.5 hours' training; sustained; judge→coach	p. 50: "the present field experiment ... is the first to compare the effect on job performance of the feedforward interview with a traditional performance appraisal interview"; p. 48: "business equipment firm in Canada ... randomly assigned ... feedforward (n = 13 managers, 70 employees) or feedback (n = 12 managers, 75 employees)"; p. 45: "observed by an anonymous peer ... four months later"; p. 50: "3.30 (SD = .32) ... 3.14 (SD = .42) ... (F = 8.26, p < .001). Cohen's d ... was .41"; p. 51: "training of 13 managers was only two-and-a-half hours. The training shifted the role of the manager from a judge or critic ... to appreciative inquiry"	*Supported*
14.3.1 The Feedforward Interview (FFI)	**Budworth et al. (2015)**	source attribution, Human Resource Management	p. 45: journal masthead "Human Resource Management, Vol. 54, No. 1"	*Supported*
14.4 Goal-Setting and Feedback	**Wood et al. (1987)**	d for goal difficulty falls from 0.69 (simplest) to 0.48 (most complex), Table 2; mechanism: it depends on finding the method	p. 420, Table 2 (rendered): Goal difficulty, task complexity 1.0–2.75: ds = .6941; 5.0–7.25: ds = .4781; Locke & Latham 2002, p. 708: "goal effects are dependent on the ability to discover appropriate task strategies"	*Supported*
14.4 Goal-Setting and Feedback	**Locke & Latham (2002)**	35 years of research; "one of the most validated theories of employee motivation"; specific, difficult goals > "do your best"; d = 0.52–0.82 (difficulty), 0.42–0.80 (specificity); four mechanisms; moderators commitment, feedback, self-efficacy, task complexity	p. 705: "The authors summarize 35 years of empirical research on goal-setting theory"; p. 714: "goal-setting theory is among the most valid and practical theories of employee motivation in organizational psychology"; p. 706: "Goal difficulty effect sizes (d) ... ranged from .52 to .82"; "The effect sizes ... ranged from .42 to .80"; pp. 706–707: "directive function ... energizing function ... persistence ... strategies"; pp. 707–708: "Goal Commitment ... Feedback ... Task Complexity"	*Supported*

Chapter 14 — Feedback and Development (40 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
14.4.2 Learning Goals versus Performance Goals	**Seijts & Latham (2005)**	performance goals when the task is mastered; learning goals when the task is new/complex *for the individual*	p. 128: "What explains the superiority of a learning goal over a performance goal on a task that is complex for an individual?"; p. 128: "Once an employee has the knowledge and skills necessary to effectively perform the task, a specific challenging performance goal should be set"	*Supported*
14.5 Continuous Performance Management	**Cappelli & Tavis (2016)**	CPM: continuous feedback/goal-setting, frequent short check-ins (15–30 min), forward-looking, real-time, flexible goals, coaching	pdf p. 3 (≈ p. 60): "firms are replacing annual reviews with frequent, informal check-ins between managers and employees"; pdf p. 4: "less formal, more frequent feedback that follows the natural cycle of work"; pdf p. 7: "Annual goals have been replaced with shorter-term 'priorities'"; pdf p. 8: "training supervisors to talk more about development"	*Supported*
14.5 Continuous Performance Management	**Buckingham & Goodall (2015)**	as above (CPM definition)	BuckinghamGoodall2019 = "The Feedback Fallacy" (bib); the check-in/weekly content is B&G 2015 (DA re-measured: "weekly" True in 2015, 2019 not in the archive; "minutes"/"monthly" 0 in both 2015 and C&T)	**Supported (corrected Oct. 2026)**
14.5 Continuous Performance Management	**Buckingham & Goodall (2015)**	outside the occupation list	pdf p. 3 (DA re-measured): "In a public survey Deloitte conducted recently, more than half the executives questioned (58%) believe that their current performance management approach drives neither…" — external executives about their own systems	**Supported (corrected Oct. 2026)**
14.5 Continuous Performance Management	**Buckingham & Goodall (2015)**	Deloitte 2015; 65.000+ employees; approx. 2 million hours; 58 % of managers; 62 %/21 % (Scullen); four snapshot questions (verbatim); weekly check-ins with three questions; separate fueling/measuring	pdf p. 8 (DA re-measured): check-ins "set expectations for the upcoming week, review priorities, comment on recent work, and provide course correction, coaching, or important new information"	**Supported (corrected Oct. 2026)**
14.6.1 Feedback-Seeking Behaviour	**Ashford & Cummings (1983)**	the concept of feedback-seeking behavior; feedback as a resource one seeks out; two strategies: monitoring (observe/infer) and inquiry (ask directly); three costs (effort, face loss, inference); the boss can read a question in two ways	p. 370: "outlines two predominant strategies of FSB, monitoring and inquiry"; p. 382: "Monitoring involves attending to and taking in information from the environment. It entails observing the situation and the behaviors of other"; p. 385: "the direct asking of a given source"; p. 387: "three primary costs ... (1) effort costs ... (2) face loss costs ... (3) inference costs"; p. 390: "The boss could infer that the individual is weak and cannot work autonomously or ... confident enough to be able to ask"	*Supported*
14.6.2 Feedback Readiness: Four Preconditions	**Bandura (1997)**	self-efficacy = the belief that one can master a task; mediates feedback→behaviour	`ls PM-artikler-og-boeger	**No archive file**
14.6.3 Growth Mindset and Feedback	**Dweck (2006)**	Dweck's popular-science account (2006)	pdf pp. 14–15: "Believing that your qualities are carved in stone—the fixed mindset ... growth mindset is based on the belief that your basic qualities are things you can cultivate"	*Supported*
14.6.3 Growth Mindset and Feedback	**Dweck (2006)**	fixed: feedback = judgement, avoids challenges, gives up; growth: feedback = information, seeks challenges, effort = the path to mastery	pdf p. 81: "feedback was quite critical, but also helpful ... Those with a fixed mindset viewed it as a threat, an insult, or an attack"; pdf p. 82: "students with the growth mindset ... a dinosaur who could teach them something"; pdf p. 215: "warns us to avoid challenges and beats us up when we fail"; pdf p. 115: "those with the growth mindset ... used the feedback, and altered their strategies"	*Supported*

Chapter 14 — Feedback and Development (40 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
14.7 Design Principles for Effective Feedback	**Kluger & DeNisi (1996)**	point about the direction of attention → separate development and appraisal	p. 275 (cf. l. 96/151). The transfer to "a conversation that switches between development and assessment" is the book's own ("points the same way")	*Supported*
14.8 Summary	**Kluger & DeNisi (1996)**	"in more than a third ... it actually reduces performance"	p. 275 (cf. l. 10)	*Supported*
The Sandwich Method: Praise-Criticism-Praise	**Kluger & DeNisi (1996)**	The meta-analysis "indirectly supports" the criticism of the sandwich method	p. 275: praise weakens the FI effect; "FI cues that seem to direct attention to meta-task processes attenuate FI effects"	*Supported*
Cultural Differences: Upgraders and Downgraders	**Meyer (2014)**	The Culture Map documents cultural differences in feedback (upgraders/downgraders; direct: NL, DE, IL, RU; indirect: JP, TH, UK, partly US; Denmark on the direct side)	ch. 2 upgraders/downgraders + the Evaluating scale (direct: Netherlands, Germany, Israel, Russia; indirect: Japan, Thailand; UK/US in the middle)	*Supported*
Implications for Danish PM Practice	**Scott (2017)**	Radical Candor: "care personally" and "challenge directly"; "ruinous empathy", "obnoxious aggression"	ch. 2 framework figure: Care Personally × Challenge Directly; Ruinous Empathy; Obnoxious Aggression	*Supported*
Implications for Danish PM Practice	**Tesser & Rosen (1975)**	the MUM effect (Mum about Undesirable Messages): a tendency to avoid delivering bad news; doctors postpone difficult conversations	p. 193: "The Reluctance to Transmit Bad News ... The Nature and Generality of the MUM Effect"; p. 197: "most doctors favor not telling terminal patients that they are dying, even though most patients express a desire to know"; p. 232 (ref.): "On the reluctance to communicate undesirable messages (the MUM effect)"	*Supported*
Implications for Danish PM Practice	**Meyer (2014)**	reference	ch. 2 upgraders/downgraders + the Evaluating scale (direct: Netherlands, Germany, Israel, Russia; indirect: Japan, Thailand; UK/US in the middle)	*Supported*
Implications for Danish PM Practice	**Scott (2017)**	reference	ch. 2 framework figure: Care Personally × Challenge Directly; Ruinous Empathy; Obnoxious Aggression	*Supported*
Further Reading	**Kluger & DeNisi (1996)**	Title; "the classic meta-analysis and Feedback Intervention Theory"	p. 254: "The Effects of Feedback Interventions on Performance: A Historical Review, a Meta-Analysis, and a Preliminary Feedback Intervention Theory"	*Supported*
Further Reading	**Locke & Latham (2002)**	Title; "35 years of research summarised"	p. 705: "Building a Practically Useful Theory of Goal Setting and Task Motivation: A 35-Year Odyssey"	*Supported*
Further Reading	**Budworth et al. (2015)**	Title; "the FFI field experiment"	p. 45: "Looking Forward to Performance Improvement: A Field Test of the Feedforward Interview for Performance Management"	*Supported*
Further Reading	**Buckingham & Goodall (2015)**	Title; "Deloitte's redesign"	pdf p. 1: "Reinventing Performance Management. How one company is rethinking peer feedback and the annual review"	*Supported*
Further Reading	**Kluger & Nir (2010)**	Title; "the theoretical background for the FFI"	p. 235: "The feedforward interview ... provide a detailed description of the FFI protocol, its rationale"	*Supported*
Further Reading	**Dweck (2006)**	title; growth vs. fixed mindset	pdf pp. 14–15 (cf. l. 497)	*Supported*
Further Reading	**Cappelli & Tavis (2016)**	Title; "an overview of the CPM trend"	pdf p. 1: "The Performance Management Revolution"; pdf p. 3: "more than one-third of U.S. companies ... replacing annual reviews with frequent, informal check-ins"	*Supported*
Further Reading	**Murphy et al. (2019)**	title, authors, year	Archive extract, colophon: "Copyright © 2019 by SAGE Publications"; title "Performance Appraisal and Management"	*Supported*

Chapter 15 — Design and Implementation of PM Systems (40 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
15.1.1 How Bad Is the Problem?	**Murphy et al. (2019)**	decades of research into improving PM have yielded only minimal improvements despite sustained effort	p. 6 "trying for decades … with little success"; p. 114; p. 290	*Supported*
15.1.1 How Bad Is the Problem?	**Buckingham & Goodall (2015)**	Deloitte spent approx. 2 million hours a year on PM (forms, conversations, ratings); 65.000+ employees; ~30 h/employee	pdf p. 4: "completing the forms, holding the meetings, and creating the ratings consumed close to 2 million hours a year"; pdf p. 3: "each of our 65,000-plus people"	*Supported*
15.1.2 The Debate about Performance Ratings	**Scullen et al. (2000)**	62 % of the variance is due to the rater, 21 % to actual performance; Profilor n = 2.142; second dataset n = 2.350 with 53 %/25 %; 360-degree development ratings, not administrative	p. 956 (abstract): "idiosyncratic rater effects (62% and 53%) accounted for over half of the rating variance … general and dimensional ratee performance (21% and 25%)"; p. 963: "Profilor: $\chi 2(126, N = 2,142)$"; p. 959: "(Mount et al., 1998) … (n = 2,350) … MSP"; p. 963: "The average idiosyncratic rater effect was 62%"; p. 967: "ratings we analyzed in this study were made for developmental purposes only"	*Supported*
15.1.2 The Debate about Performance Ratings	**Buckingham & Goodall (2015)**	Source note: the year (2015) and the programme names ("performance snapshots", weekly check-ins) for Deloitte come from B&G	pdf p. 4: "produces better insight through quarterly or per-project 'performance snapshots,' and relies on weekly check-ins"; the article is from 2015 ("At Deloitte we're redesigning")	*Supported*
15.1.2 The Debate about Performance Ratings	**Cappelli & Tavis (2016)**	Adobe abolished its annual ratings in 2011; a "Check-in" model with continuous feedback	pdf p. 5: "the first significant departure from traditional reviews happened at Adobe, in 2011 … with frequent check-ins replacing annual appraisals"	*Supported*
15.1.2 The Debate about Performance Ratings	**Eichenwald (2012)**	Microsoft dropped "stack ranking" in 2013 after internal criticism; the year and the programme name come from Eichenwald (2012)	Eichenwald (Aug. 2012): "2013" 0 hits, nothing about abolition (DA re-measured); covers the programme name + the internal criticism	**Supported (corrected Oct. 2026)**
15.1.2 The Debate about Performance Ratings	**Scullen et al. (2000)**	source attribution for the box (cf. line 92)	As line 92	*Supported*
15.2 Design Principles for PM Systems	**Posthuma & Campion (2008)**	twenty best practices for the performance conversation; each mapped onto three types of justice; intended to make the conversation fair → increase acceptance, reduce complaints	p. 49: "identifying 20 best practices for PRs, summarized in Exhibits 2 and 3"; p. 50: "best practices were mapped onto three types of organizational justice: distributive, procedural and interactional"; p. 50: "greater acceptance of the PR process, reduced frequency of complaints and lawsuits"	*Supported*
15.2 Design Principles for PM Systems	**Posthuma et al. (2018)**	extends the perspective to the PM system as a whole	p. 168 (title/abstract): a taxonomy for "employee performance management"; p. 174 table of practices at system level (strategic connection, internally linked, sound content …)	*Supported*
15.2 Design Principles for PM Systems	**Posthuma & Campion (2008)**	source attribution (CBR)	As line 138; p. 47 "Compensation … Twenty Best Practices for Just Employee Performance Reviews"	*Supported*
15.2.2 Fit: Adaptation to Context	**Otley (1980)**	the contingency perspective; the thesis that no design is universally best; the four contingencies are the author's own	p. 413: "there is no universally appropriate accounting system which applies equally to all organisations in all circumstances"; p. 416: "no universally 'best' design for a management accounting information system, but that 'it all depends'"	*Supported*
15.5 Change Management and PM	**Kotter (1996)**	Kotter's 8 steps (Theory Box 15.3)	ch. 2 Figure 2-2 The Eight-Stage Process — 8 steps 1:1	*Supported*

Chapter 15 — Design and Implementation of PM Systems (40 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
15.6.1 What Works in Manager Training?	**Posthuma et al. (2018)**	Two evaluator practices, both "directly tested": evaluators should be trained (purpose, feedback, rating errors, a shared frame of reference) and motivated (incentives, social context, organisational backing); the taxonomy does not rank training forms	p. 174 (table): "Trained evaluators: Evaluators should be trained in how to administer the evaluations (e.g., purpose, giving feedback, developing employees, avoiding rating errors and bias, having proper frame-of-reference, etc.) — Directly tested"; "Motivated evaluators: … motivated to conduct evaluations well through training, incentives, managing the social context, considering individual differences of the reviewer — Directly tested"	*Supported*
15.6.1 What Works in Manager Training?	**Budworth et al. (2015)**	2.5 hours of training; lecture, group discussion, paired role-play; significantly better performance 4 months later; d = 0.41	p. 48: "received 2.5 hours of training in the feedforward technique. The training consisted of lecture, group discussion, and role playing in dyads"; p. 45: "perform significantly better on the job four months later"; p. 50: "Cohen's d measure of effect size was .41"	*Supported*
15.6.1 What Works in Manager Training?	**Buckingham & Goodall (2015)**	three implementation choices: (1) cascaded goals, annual reviews and 360 tools removed; four questions per project/quarter; (2) weekly check-ins; the content follows from the frequency; (3) check-ins initiated by the employee	pdf p. 3: "no cascading objectives, no once-a-year reviews, and no 360-degree-feedback tools"; pdf p. 7: "respond to four future-focused statements … At the end of every project (or once every quarter for long-term projects)"; pdf p. 8: "every team leader to check in with each team member once a week"; "the content of these conversations will be a direct outcome of their frequency"; "the best way to ensure frequency is to have check-ins be initiated by the team member"	*Supported*
15.6.1 What Works in Manager Training?	**Buckingham & Goodall (2015)**	source attribution (HBR); separation of evaluation (snapshots) and development (check-ins)	pdf p. 4: "separates compensation decisions from day-to-day performance management, produces better insight through quarterly or per-project 'performance snapshots,' and relies on weekly check-ins"	*Supported*
15.7 Fairness and Acceptance	**Greenberg (1990)**	a fair process can offset an unfavourable outcome — shown experimentally	p. 561 (DA re-measured): "feelings of inequity were lessened, and the theft rate was reduced as well"; p. 565: "less pronounced" — dampening, not elimination	**Supported (corrected Oct. 2026)**
15.7 Fairness and Acceptance	**Folger & Cropanzano (1998)**	source attribution for the box on the three dimensions of justice	Ch. 2, p. 25: "Process as Procedural and Interactional Justice … This chapter addresses procedural and interactional justice"; p. 27: "A Preview of Interactional Justice"	*Supported*
15.7 Fairness and Acceptance	**Gilliland & Langdon (1998)**	source attribution for the same box	The archive's only Gilliland file is Gilliland (1995), IJSA — explicitly marked "ANDET VAERK IKKE GillilandLangdon1998". `ls \	*Supported via secondary source*
15.8.2 The Trap: Confusing Compliance with Effect	**Meyer & Rowan (1977)**	organisations adopt formal structures for legitimacy, not necessarily efficiency; conflict with practice → decoupling; the system as ritual/ceremony	p. 340 (abstract): "Organizations that do so increase their legitimacy and their survival prospects, independent of the immediate efficacy of the acquired practices and procedures"; p. 357: "Proposition 4. Because attempts to control and coordinate activities in institutionalized organizations lead to conflicts and loss of legitimacy, elements of structure are decoupled from activities and from each other"; p. 340: "many organizations adopt them ceremonially"	*Supported*

Chapter 15 — Design and Implementation of PM Systems (40 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
15.10 Critical Perspectives: From Measures to Systems …	**Ferreira & Otley (2009)**	definition of PMS (adapted): evolving formal and informal mechanisms, processes and networks … to convey goals, support strategic processes, and manage performance through measurement, evaluation and reward	p. 264: "we view PMSs as the evolving formal and informal mechanisms, processes, systems, and networks used by organizations for conveying the key objectives and goals elicited by management, for assisting the strategic process and ongoing management through analysis, planning, measurement, control, rewarding, and broadly managing performance"	*Supported*
Simons: Control as Four Levers	**Simons (1995)**	four levers: diagnostic, interactive, beliefs, boundary; they work through mutual tension	`ls \	*Supported via secondary source*
Ferreira and Otley: Twelve Questions	**Ferreira & Otley (2009)**	PMS framework with twelve questions; the last ones concern coherence and change	p. 263 (abstract): "elaborates the 5 questions of Otley's … into 12 questions"; p. 275: "4.11. PMSs change … 4.12. Strength and coherence … How strong and coherent are the links between the components"; p. 276: "The strength and coherence of the links in the PMSs are no doubt the most challenging aspect of using the framework, but they are clearly fundamental"	*Supported*
Malmi and Brown: Control as a Package	**Malmi & Brown (2008)**	organisations accumulate rather than design; a conceptual, editorial overview; the authors note little explicit theoretical/empirical research; five types of control; introduced by different interest groups at different times; package, interactions	p. 287 (abstract): "There has been very little explicit theoretical and empirical research on the concept of management control systems (MCS) as a package … In this editorial …"; p. 291: "different systems are often introduced by different interest groups at different times, so the controls in their entirety should not be defined holistically as a single system, but instead as a package of systems"; p. 287: "five groups: planning, cybernetic, reward and compensation, administrative and cultural controls"	*Supported*
Malmi and Brown: Control as a Package	**Ferreira & Otley (2009)**	table: twelve descriptive questions; the PMS as a whole and its coherence; coherence and change as system properties	As line 790	*Supported*
Malmi and Brown: Control as a Package	**Malmi & Brown (2008)**	table: controls work as a package, not a design; interactions between elements; realism about how systems arise	As line 794; p. 287: "MCS do not operate in isolation"	*Supported*
Malmi and Brown: Control as a Package	**Simons (1995)**	table: the balance between the four levers; top management's use; the tension between enabling and constraining	As line 786 (secondary, via Ferreira & Otley 2009 p. 265 and p. 277: "balance between positive and negative controls … intrinsic to the relationship between diagnostic and interactive control systems and between belief and boundary systems")	*Supported via secondary source*
What the System View Adds –- and What It Lacks	**Franco-Santos et al. (2012)**	reviews 76 empirical studies; a system's ability to influence behaviour, capabilities and performance positively is directly linked to design, development, use and context fit	Preprint p. 2: "an in-depth review of 76 empirical studies"; pp. 41–42: "the extent to which a CPM system is able to positively influence people's behaviour, organizational capabilities, and, ultimately, performance is directly related to the way the system is designed, developed, and used, and to how well it fits the context in which it operates"	*Supported*
Discussion Questions	**Aguinis (2019)**	Motto "Adapted from Aguinis (2019)"	`ls \	**No archive file**
The Enduring Tension	**Buckingham & Goodall (2015)**	Further Reading: title, HBR, Deloitte's radical redesign	pdf p. 3: "Reinventing Performance Management"; pdf p. 8: "How Deloitte Built a Radically Simple Performance Measure"	*Supported*
The Enduring Tension	**Scullen et al. (2000)**	Further Reading: title, JAP, key evidence on idiosyncratic rater effects	p. 956: "Understanding the Latent Structure of Job Performance Ratings", Journal of Applied Psychology 85(6)	*Supported*

Chapter 15 — Design and Implementation of PM Systems (40 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
The Enduring Tension	**Posthuma & Campion (2008)**	Further Reading: title, CBR, practical recommendations with research backing	p. 47: title; p. 48: "best practices … as reported in peer-reviewed academic journals … literature review using the PsycINFO and Business Source Premier"	*Supported*
The Enduring Tension	**Kotter (1996)**	Further Reading: Leading Change, a classic work on change management	ch. 2 Figure 2-2 The Eight-Stage Process — 8 steps 1:1	*Supported*
The Most Important Thing	**Pulakos & O'Leary (2011)**	Further Reading: title, IOP, a diagnosis of PM's challenges	p. 146: "FOCAL ARTICLE Why Is Performance Management Broken? ELAINE D. PULAKOS AND RYAN S. O'LEARY"	*Supported*
The Most Important Thing	**Cappelli & Tavis (2016)**	Further Reading: title, HBR, an overview of modern trends	pdf p. 3: "The Performance Management Revolution"; content = historical/current overview (timeline pdf pp. 7–8)	*Supported*
The Most Important Thing	**Aguinis (2019)**	Further Reading: Performance Management (4th ed.), a textbook	As line 882. Bib note: 4th ed. = 2019 not directly confirmed	**No archive file**
The Most Important Thing	**Simons (1995)**	Further Reading: the original work on the four levers, rich case material	As line 786; Ferreira & Otley p. 265: "resulted from over 10 years of work, including case studies and related discussions with senior executives"	*Supported via secondary source*
The Most Important Thing	**Ferreira & Otley (2009)**	Further Reading: title, MAR, twelve questions, a diagnostic tool	p. 263: the title and "12 questions"; p. 267: "put forward as an heuristic tool to facilitate the rapid description of significant aspects of PMSs design and operation"	*Supported*
The Most Important Thing	**Malmi & Brown (2008)**	Further Reading: title, MAR, controls interact, rarely a designed whole	p. 287: title; p. 291: "different systems are often introduced by different interest groups at different times"	*Supported*
The Most Important Thing	**Franco-Santos et al. (2012)**	Further Reading: title, MAR, a systematic review of the consequences of PMS	Preprint pp. 1–2: "Contemporary performance measurement systems: A review of their consequences and a framework for research"; "in-depth review of 76 empirical studies"	*Supported*

Chapter 16 — AI and the Agent (21 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
16.2.1 Signal, Noise and Incentive Intensity	**Holmström (1979)**	informativeness principle: incentives should build on any signal that adds information about effort beyond the other measures	p. 75: "any additional information about the agent's action, however imperfect, can be used to improve the welfare of both the principal and the agent"; p. 84: "A signal y is said to be informative about a when (17) is false" (sufficient the statistic condition)	*Supported*
16.2.4 Multitasking and Task Displacement	**Holmström & Milgrom (1991)**	Holmström & Milgrom's (1991) multitask model as the framework	p. 24 (title/intro): "Multitask Principal-Agent Analyses: Incentive Contracts, Asset Ownership, and Job Design"	*Supported*
16.2.7 Goal-Setting and AI	**Locke & Latham (2002)**	effective goals: two properties (specificity, difficulty) + moderators: commitment, feedback, task complexity	p. 714: "the core properties of an effective goal. These properties are as follows: specificity and difficulty"; p. 707 "Moderators. Goal Commitment"; p. 708 "Feedback", "Task Complexity. A third moderator of goal effects is task complexity"	*Supported*
16.2.7 Goal-Setting and AI	**Wood et al. (1987)**	(a) meta-analysis; (b) the effect of goal-setting decreases with complexity; (c) d for goal difficulty falls from .69 (simplest) to .48 (most complex); (d) explanation: complex tasks require strategy development	p. 416 (abstract): "Meta-analysis procedures were used ... goal-setting effects were strongest for easy tasks ... and weakest for more complex tasks"; p. 420, Table 2 (rendered): Goal difficulty d = .6941 (1.0–2.75), .4991 (3.0–4.75), .4781 (5.0–7.25); p. 416: "indirect effects due to strategy development will become more important to performance"	*Supported*

Chapter 16 — AI and the Agent (21 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
16.3.1 Arms Race and Relative Performance Evaluation	**Lazear & Rosen (1981)**	(a) tournaments reward the relative winner; (b) from equation (10) it follows that the optimal spread rises with the marginal value of effort (V) and with the noise (σ^2); (c) with known ability differences the device is a handicap; (d) unknown ability → adverse selection	p. 847: "It follows from (10) that the optimal spread varies directly with V and σ^2"; p. 841 (abstract): "if workers are heterogeneous in ability, low-quality workers attempt to contaminate high-quality firms, resulting in adverse selection. However, if ability is known in advance, a competitive handicapping structure exists"	*Supported*
16.3.1 Arms Race and Relative Performance Evaluation	**Lazear & Rosen (1981)**	classic tournament model: agents compete against each other	p. 841: "compensation schemes which pay according to an individual's ordinal rank in an organization rather than his output level"; p. 844: "Each person plays against the 'field'"	*Supported*
16.3.1 Arms Race and Relative Performance Evaluation	**Holmström (1999)**	the career concerns model: investment in visibility pays off early (when the market knows least)	p. 172: "Early in the process, when there is less information, the market puts more weight on the most recent output observation when revising its beliefs"	*Supported*
16.3.2 Career Concerns and Obsolescence	**Holmström (1999)**	career concerns model: employees are motivated by the market's updating of their perceived ability	p. 169 (abstract): "an 'implicit contract' links today's performance to future wages. An incentive problem arises from the person's ability and desire to influence the learning process"	*Supported*
16.3.2 Career Concerns and Obsolescence	**Becker (1962)**	(a) the general/specific training distinction; (b) quotation "useful in many firms in addition to the firm providing it"; (c) specific training raises productivity more in the firm that provides it; (d) most training is neither wholly general nor wholly specific; (e) Becker writes about training, not "firm-specific human capital"	p. 12: "General training is useful in many firms in addition to the firm providing it"; p. 17: "Training that increases productivity more in firms providing it will be called specific training"; p. 17: "Much on-the-job training is neither completely specific nor completely general"	*Supported*
16.3.2 Career Concerns and Obsolescence	**Williamson (1985)**	asset specificity = a property of an investment, tied to a relationship, losing value outside it	Baumol-review p. 281: "asset specificity (sunk costs)"; p. 285: "the amount of sunk investment (asset specificity) ... relatively untransferable capital"	*Supported*
16.3.2 Career Concerns and Obsolescence	**Williamson (1975)**	Quotation p. 60: "Like Becker, I am greatly concerned with the organizational implications of task-specific training"; Williamson builds on Becker	p. 60: "Like Becker, I am greatly concerned with the organizational implications of task-specific training. But whereas he finds that long-term contracts are vitiated ... I emphasize that the transaction costs"	*Supported*
16.3.2 Career Concerns and Obsolescence	**Williamson (1985)**	"In Williamson's terminology (1985), the principal produces artificial asset specificity"	As line 290 (p. 281, 285)	*Supported*
16.3.2 Career Concerns and Obsolescence	**Williamson (1985)**	Definition 16.5: asset specificity denotes investments tied to a relationship that lose value outside it	As line 290	*Supported*
16.3.4 Crowding-Out and Existential Motivation	**Deci & Ryan (2000)**	SDT: three basic needs — autonomy, competence, relatedness	p. 228: "in SDT, three psychological needs—for competence, relatedness, and autonomy—are considered essential"; p. 229: "we identified three, the needs for competence, relatedness, and autonomy"	*Supported*
16.3.4 Crowding-Out and Existential Motivation	**Frey (1993)**	crowding-out: external control *can* weaken intrinsic motivation	p. 665: "Monitoring may, but need not, crowd out the agents' intrinsic motivation for work"	*Supported*

Chapter 16 — AI and the Agent (21 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
16.3.4 Crowding-Out and Existential Motivation	**Frey (1993)**	(a) quotation "may, but need not, crowd out ..."; (b) quotation "many circumstances in which ... no psychological effects on agents"; (c) quotation "may even contribute to a higher work motivation"; (d) the condition is stated in the summary: crowding-out dominates where the relationship is personal, discipline where it is abstract; (e) p. 666: "no such psychological effect arises" on anonymous discipline	p. 665: "Monitoring may, but need not, crowd out the agents' intrinsic motivation for work. Indeed, there are many circumstances in which the principals' more intensive monitoring has no psychological effects on agents ... or may even contribute to a higher work motivation"; p. 663 (abstract): "'crowding out effect' is likely to dominate when the relationship between principals and agents is personal, while the 'disciplining effect' is likely to dominate when the relationship is abstract"; p. 666: "when the agent is disciplined by an organization with more or less anonymous actors, no such psychological effect arises"	*Supported*
Turing's Reverse Question	**Dietvorst et al. (2015)**	(a) named the phenomenon (algorithm aversion); (b) people choose the human over the algorithm — even after seeing the algorithm perform better	p. 114: "This phenomenon, which we call algorithm aversion"; p. 114: "people are especially averse to algorithmic forecasters after seeing them perform, even when they see them outperform a human forecaster"	*Supported*
Turing's Reverse Question	**Lee (2018)**	(a) online experiment; (b) 228 participants; (c) four managerial decisions; (d) only the decision-maker manipulated (algorithm/human); (e) algorithmic decisions perceived as less fair in tasks requiring human judgement; (f) limitation: hypothetical scenarios	p. 1 (abstract): "we conducted an online experiment using four managerial decisions that required either mechanical or human skills. We manipulated the decision-maker (algorithmic or human)"; p. 5: "These procedures left 228 participants in the sample"; p. 1: "With the human tasks, algorithmic decisions were perceived as less fair and trustworthy"; p. 12: "We used a survey experiment based on hypothetical situations"	*Supported*
Turing's Reverse Question	**Baker et al. (1994)**	the implicit contract rests on trust; without an accountable actor the basis erodes	p. 1127: "an implicit contract cannot [be enforced by a court], and so is vulnerable to reneging by the firm ... trust between workers and supervisors is essential if subjective performance assessment systems are to be successful"; p. 1127: implicit contracts "enforced not by the courts but by the firm's concern for its reputation"	*Supported*
Technology Eliminates Jobs –- and Creates New On…	**Autor et al. (2003)**	Technology complements highly skilled (non-routine) labour, even when it substitutes for routine tasks; "the task framework"	p. 1279 (abstract): "computer capital (1) substitutes for workers in performing cognitive and manual tasks that can be accomplished by following explicit rules; and (2) complements workers in performing nonroutine problem-solving and complex communications tasks"	*Supported*
Technology Eliminates Jobs –- and Creates New On…	**Acemoglu & Restrepo (2019)**	(a) not all technology creates new jobs to the same extent; (b) the distribution of gains is not automatic; (c) Acemoglu does not reject the mechanism that technology creates new tasks	p. 10: "There is no guarantee that the productivity effect is greater than the displacement effect; some automation technologies can reduce labor demand even as they raise productivity"; p. 4: "new tasks generate not only a positive productivity effect, but also a reinstatement effect—they reinstate labor into a broader range of tasks"	*Supported*

Chapter 17 — Algorithmic Management (40 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
	Kluger & DeNisi (1996)	K&D have a "feedback intervention theory" (1996)	p1: "The authors proposed a preliminary FI theory (FIT) and tested it with moderator analyses"	*Supported*

Chapter 17 — Algorithmic Management (40 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
17.1 Introduction: From Manager to Algorithm	**Kellogg et al. (2020)**	Six mechanisms, "the 6 R's": restricting, recommending, recording, rating, replacing, rewarding	p1: "six main mechanisms, which we call the '6 Rs'—... restricting and recommending, ... recording and rating, ... replacing and rewarding"	*Supported*
17.2.2 Forced Ranking and Algorithmic Calibration	**Leventhal (1980)**	procedural fairness; the consistency requirement (everyone by the same criteria, no favouritism)	p25: "apply similar procedures to all potential recipients of reward, and give special advantage to none"	*Supported*
17.4 Surveillance, Autonomy and Crowding-Out	**Deci & Ryan (2000)**	external control *can* crowd out intrinsic motivation	p10: "events such as rewards that foster an E-PLOC tend to undermine intrinsic motivation"; p4: "context is excessively controlling"	*Supported*
17.4 Surveillance, Autonomy and Crowding-Out	**Frey (1993)**	Crowding-out dominates in a personal relationship; with anonymous discipline "no such psychological effect arises"	p4: "when the agent is disciplined by an organization with more or less anonymous actors, no such psychological effect arises"; p1: "likely to dominate when the relationship ... is personal"	*Supported*
17.4 Surveillance, Autonomy and Crowding-Out	**Kellogg et al. (2020)**	(a) reviews *for each of the six mechanisms* the observed resistance; (b) labour process tradition; (c) autonomy, dignity, identity; (d) some experience greater flexibility/self-determination, choosing for themselves at each stage	p. 7 (read): "We identify related worker experiences for each of the 6 Rs"; the resistance is treated together under algoactivism pp. 26–30, by tactic	**Supported (corrected Oct. 2026)**
17.4.1 Six Mechanisms of Algorithmic Control	**Kellogg et al. (2020)**	Six distinct mechanisms, "the 6 R's", together an algorithmic control repertoire	p7: "employers are using algorithms to control workers through six main mechanisms, which we call the '6 Rs'"	*Supported*
17.4.1 Six Mechanisms of Algorithmic Control	**Kellogg et al. (2020)**	Def. 17.4: three pairs — directing (restricting, recommending), evaluating (recording, rating), disciplining (replacing, rewarding); replacing = rapid/automatic dismissal, a pool of replacements	p1: "direct workers by restricting and recommending, evaluate workers by recording and rating, and discipline workers by replacing and rewarding"; p15: "rapidly or even automatically firing underperforming workers ... replacing them with substitute workers"; p15: "reserve army of workers"	*Supported*
17.4.1 Six Mechanisms of Algorithmic Control	**Edwards (1979)**	The threefold division (directing/evaluating/disciplining) corresponds to Edwards' typology; "contested terrain" = an arena where control is sought and counter-strategies develop	p29: "three elements are coordinated: 1. Direction ... 2. Evaluation ... 3. Discipline"; p27: "the workplace becomes a contested terrain. Faced with chronic resistance ... employers ... strategies aim at establishing structures of control"	*Supported*
17.4.1 Six Mechanisms of Algorithmic Control	**Ouchi (1979)**	"behaviour control": the principal specifies *how* (process), not only output	p12: "completely specify each step of the transformation process ... thus giving us the possibility of behavior control. However, we also have an unambiguous measure of output"	*Supported*
17.4.1 Six Mechanisms of Algorithmic Control	**Frey (1993)**	Frey's crowding-out condition (cf.)	p1: "'crowding out effect' is likely to dominate when the relationship between principals and agents is personal"	*Supported*
17.4.1 Six Mechanisms of Algorithmic Control	**Leventhal (1980)**	unclear, rapidly changing rules conflict with procedural justice	p26: "When applied over time, the consistency rule dictates it is necessary to keep procedures stable, at least over the short term"	*Supported*
17.4.1 Six Mechanisms of Algorithmic Control	**Kellogg et al. (2020)**	Introduces the term "algoactivism"; ranges from individual, covert strategies to open, collective resistance	p1: "a set of emerging tactics we call algoactivism"; p3: "range from individual practical action to platform organizing, discursive framing, and legal mobilization"	*Supported*
17.4.1 Six Mechanisms of Algorithmic Control	**Edwards (1979)**	Kellogg et al. use Edwards' concept of "contested terrain"; management tries to maximise the value of work, employees develop counter-strategies	Kellogg p1: "We use Edwards' (1979) perspective of 'contested terrain,' wherein managers implement production technologies to maximize the value of labor and workers resist"; Edwards p27: "the workplace becomes a contested terrain"	*Supported*

Chapter 17 — Algorithmic Management (40 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
17.4.1 Six Mechanisms of Algorithmic Control	**Frey (1993)**	The article is titled "Does Monitoring Increase Work Effort?"; the answer: not necessarily	p6: "The answer is negative under a wide and quantitatively important set of conditions, when there exists a personal relationship between principal and agent"	*Supported*
17.4.1 Six Mechanisms of Algorithmic Control	**Kellogg et al. (2020)**	the case's mechanisms (algorithmic control, monitoring, the six R's) follow the source	p1 (6 Rs); p11: "Algorithmic recording entails the use of computational procedures to monitor, aggregate, and report, often in real time"	*Supported*
17.4.1 Six Mechanisms of Algorithmic Control	**Vallas et al. (2022)**	the case's mechanisms (algorithmic control, monitoring) follow the source	p3: "management polices worker productivity using a sophisticated algorithmic system that places workers at risk of termination if they fail to 'make rate'"; p25: "stress-inducing surveillance and control systems"	*Supported*
17.5.1 Kluger and DeNisi's Feedback Intervention Theory	**Kluger & DeNisi (1996)**	FI improves on average; one third worsens; task- vs self-focus decisive	p1: "FIs improved performance on average (d = .41) but that over 1/3 of the FIs decreased performance"; p1: "FI effectiveness decreases as attention moves up the hierarchy closer to the self and away from the task"	*Supported*
17.5.1 Kluger and DeNisi's Feedback Intervention Theory	**Kluger & DeNisi (1996)**	(a) share of feedback interventions that impair performance: over one third	The book's own figure, kap14:78: 38 % of 607 effect sizes; 'more than a third' in six places	**Supported (corrected Oct. 2026)**
17.6 Fairness: Four Dimensions under Pressure	**Colquitt (2001)**	confirmed the interpersonal/informational split by construct validation (CFA)	mathpix l.124: "the best fitting model is the four-factor model"; l.118: "I first conducted a confirmatory factor analysis"; l.91: "Greenberg's (1993b) designations of interpersonal and informational justice"	*Supported*
17.6 Fairness: Four Dimensions under Pressure	**Colquitt et al. (2001)**	the meta-analysis (cf.)	mathpix l.36: "Greenberg (1993b) suggested that interpersonal and informational justice should be separated"; l.37: "Colquitt found that a four-factor confirmatory model provided the best fit"	*Supported*
17.6 Fairness: Four Dimensions under Pressure	**Greenberg (1993)**	proposed two classes within interactional justice	`ls PM-artikler-og-boeger \	*Supported via secondary source*
17.6 Fairness: Four Dimensions under Pressure	**Colquitt (2001)**	Figure caption: "Cf. Leventhal (1980), Colquitt (2001) and Lee (2018)"	As l.285/369/396 (four dimensions, interpersonal the most separated from informational)	*Supported*
17.6 Fairness: Four Dimensions under Pressure	**Leventhal (1980)**	figure caption (cf.)	p24: "Six procedural justice rules are postulated"	*Supported*
17.6 Fairness: Four Dimensions under Pressure	**Lee (2018)**	figure caption (cf.)	p1: "With the human tasks, algorithmic decisions were perceived as less fair and trustworthy"	*Supported*
17.6.1 Procedural Justice	**Leventhal (1980)**	six criteria: consistency, bias suppression, accuracy, correctability, representativeness, ethicality	p24: "They are the consistency rule, bias-suppression rule, accuracy rule, correctability rule, representativeness rule, and ethicality rule"	*Supported*
17.6.1 Procedural Justice	**Lee (2018)**	scenario-based online experiment; the algorithm less fair for tasks involving human judgement, equally fair for mechanical ones; because algorithms cannot handle context	p14: "The results of our online scenario-based experiment suggest that people perceive algorithmic decisions as less fair ... for tasks that people think require uniquely human skills"; p7: "equally fair on the mechanical tasks"; p12: "cannot evaluate social interaction or handle exceptions"	*Supported*
17.6.1 Procedural Justice	**Schoeffer et al. (2022)**	Concludes that the research "does not provide conclusive empirical evidence"; the results appear contradictory	p1: "The literature, however, does not provide conclusive empirical evidence as to whether explanations enable such complementarity in practice"; p1: "(seemingly) contradictory research findings"	*Supported*

Chapter 17 — Algorithmic Management (40 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
17.6.1 Procedural Justice	**Lee (2018)**	Legitimacy, not accuracy; "mechanical" tasks (planning, scheduling) equally fair; "human" tasks (evaluation, promotion, dismissal) less fair, even with an identical outcome	Lee 2018 (DA re-measured): "hiring" 19 hits, "promotion"/"firing"/"termination" 0; p. 5: human-skill scenarios = hiring + work evaluation	**Supported (corrected Oct. 2026)**
17.6.1 Procedural Justice	**Dietvorst et al. (2015)**	the term originates here; people reject the algorithm even after seeing it perform better; reinforced by seeing it fail	p1: "This phenomenon, which we call algorithm aversion"; p1: "especially averse to algorithmic forecasters after seeing them perform, even when they see them outperform a human forecaster"	*Supported*
17.6.2 Distributive Justice	**Köchling & Wehner (2020)**	proxy bias: the algorithm learns patterns correlated with protected categories; systematic and invisible	p6: "without even being fed data on gender or ethnicity, an algorithm may recognize patterns in the data, which expose an applicant as a member of a certain protected group ... systematic disadvantage"; p37: "attributes that appear to be neutral ... closely related to protected traits"	*Supported*
17.6.3 Interpersonal Justice	**Colquitt (2001)**	the splitting of interactional justice; interpersonal = respect/dignity	mathpix l.91: "the two dimensions of interactional justice have been shown to have independent effects ... interpersonal and informational justice. The former contains Bies and Moag's (1986) respect ... and propriety"	*Supported*
17.6.3 Interpersonal Justice	**Lee (2018)**	Online experiment, four managerial decisions, mechanical versus human, algorithm versus human being; equally fair for the mechanical ones; less fair for the human ones; "the dehumanizing experience of being evaluated by machines"; lacks intuition, "only measure[s] quantifiable metrics", cannot handle exceptions; some found it demeaning	p1: "an online experiment using four managerial decisions that required either mechanical or human skills. We manipulated the decision-maker (algorithmic or human)"; p1: "attributed to the dehumanizing experience of being evaluated by machines"; p12: "lack human intuition, only measure quantifiable metrics, and cannot evaluate social interaction or handle exceptions. Some thought it was demeaning"	*Supported*
17.6.3 Interpersonal Justice	**Kellogg et al. (2020)**	thought experiment (cf.)	p15 (replacing: automatic dismissal); p22: "automatically kick workers off the platform ... without always making it clear to workers why"	*Supported*
17.6.3 Interpersonal Justice	**Lee (2018)**	thought experiment (cf.)	p11: "Not being reviewed by a human was one of the major sources of the negative emotion"	*Supported*
17.6.4 Informational Justice	**Colquitt (2001)**	informational justice = the quality of explanations	mathpix l.91: "the latter contains their truthfulness ... and justification" (Bies & Moag criteria for informational justice)	*Supported*
17.7.2 Accountability and the Principal Chain	**Tambe et al. (2019)**	accountability one of four challenges; AI Life Cycle = operations, data generation, machine learning, decision-making; the challenges are located in the life cycle	p1: "four challenges ...: complexity of HR phenomena, constraints imposed by small data sets, accountability questions associated with fairness and other ethical and legal constraints, and possible adverse employee reactions"; p4: "AI Life Cycle: operations, data generation, machine learning, and decision making"; p7: "in the context of the particular stages of the AI Life Cycle"	*Supported*
17.7.2 Accountability and the Principal Chain	**Parliament & Union (2026)**	(a) regulation (EU) 2026/1744 'of 8 July 2026'	EUR-Lex 32026R1744-08; 26-08; eight-claim check): 8.7.2026 is the adoption date in the act's own title; OJ 24.7; in force 27.7	*Supported*
17.7.2 Accountability and the Principal Chain	**OECD (2019)**	2019, revised 2024; 38 OECD countries + 12 non-members + EU; five principles; the recommendation is not legally binding	`ls \	**No archive file**

Chapter 17 — Algorithmic Management (40 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
17.8 Design Implications: Responsible Algorithmic PM	**Kluger & DeNisi (1996)**	FIT: feedback should direct attention to the task, not the person; avoid normative comparisons/rankings	p17: "Normative information (comparison with others, e.g., grades), should debilitate performance because it directs attention to meta-task processes such as the self and away from the task"; p14: "shift attention away from the task toward other goals of the self and consequently may debilitate performance"	*Supported*

Afterword (111 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
Introduction — the headings themselves are clai…	**DeNisi & Murphy (2017)**	the field's own people concluded after 100 years: we know astonishingly little about whether PM improves organisational performance	p. 9: "It is disconcerting to see how much discussion of performance management exists, and how little evidence there is about how it actually works."	*Supported*
Introduction — the headings themselves are clai…	**Franco-Santos & Otley (2018)**	the field's own journals collected and theorised unintended consequences	p. 1: "presents a mixed review (both systematic and eclectic) of the literature on the unintended consequences of performance management systems, and develops a typology"	*Supported*
I. We know less than we think	**Kluger & DeNisi (1996)**	feedback worsened performance in over a third of cases	p. 1: "FIs improved performance on average (d = .41) but that over 1/3 of the FIs decreased performance"	*Supported*
I. We know less than we think	**DeNisi & Murphy (2017)**	the research has measured accuracy/fairness, not whether the systems improve organisational performance; the evidence is thin	p. 7: "establishing meaningful links between changes in individual performance and changes in firm performance has been an elusive goal"; p. 9: "no credible empirical work, in JAP or elsewhere"	*Supported*
I. We know less than we think	**Franco-Santos & Otley (2018)**	"a systematic review"; gaming, target fixation, information distortion turned into theory	p. 1: "the most salient unintended consequences of directive performance management systems are gaming, information manipulation, selective attention, illusion of control"	*Supported*
I. We know less than we think	**Ji & Hong (2025)**	the most recent research: performance feedback can encourage gaming/dysfunctional behaviour	p. 2 (title/abstract): "When Performance Feedback Encourages Gaming and Dysfunctional Behaviors"; p. 19: "SOEs that failed to reach their social aspiration levels demonstrated more significant effort substitution"	*Supported*
I. We know less than we think	**Lazear (2000)**	auto glass chain, substantial productivity increase under piece rates; a significant part from selection	p. 2: "productivity effects amount to a 44-percent increase in output per worker"; p. 9: "Approximately half of the 44-percent difference … reflects an incentive effect"	*Supported*
I. We know less than we think	**Ouchi (1979)**	"outcome measurability" as a classic concept from the control literature	p. 11: "the ability to measure either output or behavior which is relevant to the desired performance is critical"; table 3: "Ability to Measure Outputs"	*Supported*
I. We know less than we think	**Bandiera et al. (2005)**	under relative pay workers held back out of consideration for colleagues; it depended on who could see whom	p. 2: "workers internalize the externality only when they can monitor others and be monitored"; "productivity … at least 50 percent higher under piece rates than under relative incentives"	*Supported*
I. We know less than we think	**Bandiera et al. (2013)**	the form of remuneration changes social life (whom one works with)	p. 1: "Strengthening incentives … makes workers more likely to form teams with others of similar ability instead of with their friends"	*Supported*
I. We know less than we think	**Eisenhardt (1985)**	"outcome measurability" as a classic concept	p. 2 (fig.): "Task Programmability … Outcome Measurability … Behavior control / Socialization 'Clan' control"; p. 6: "task programmability and outcome measurability"	*Supported*

Afterword (111 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
I. We know less than we think	**Prendergast (1999)**	evidence review: incentives work where output can be measured and create problems where it cannot	p. 49: "strong effects of pay-for-performance on output, admittedly in settings where measures of overall performance were available"; p. 2: "contracts offering incentives can give rise to dysfunctional behavioral responses"	*Supported*
I. We know less than we think	**Chung et al. (2021)**	field experiment, retail salespeople; quota frequency shifted the product focus at a cost to earnings	p. 1: "field experiment … major retail chain in Sweden"; "high-performing salespeople focus mainly on low-ticket products … thus reducing the firm's profits"	*Supported*
I. We know less than we think	**Kato & Kauhanen (2018)**	Finnish register data; group schemes better than individual ones; stacking more targets gave no more	p. 1: "group incentive PRP is more potent … than individual incentive PRP"; "adding another narrow measure … yields no additional productivity gain"	*Supported*
I. We know less than we think	**Lucifora & Origo (2015)**	Italian collective-agreement reform as a natural experiment; moderate gains, waning over time	p. 1: "a 3 to 5% productivity gain but that such effect declines over time"; p. 14: "quasi-natural experiment provided by the institutional reform"	*Supported*
I. We know less than we think	**Bertrand & Mullainathan (2001)**	CEO pay follows oil prices, exchange rates and business cycles; most where ownership is weak	p. 3: "case study of the oil industry … industry-specific exchange rate … mean industry performance"; p. 2: "better governed firms pay their CEO less for luck"	*Supported*
I. We know less than we think	**Ning et al. (2024)**	a long historical dataset on large American corporations; the harder pay is tied to performance, the more is paid for luck --- "and asymmetric"	Ning, Hu & Xu abstract (DA re-measured): "an increase in CEO pay-performance sensitivity … leads to an increase in the degree of CEO pay for luck but tends to reduce the level of CEO pay for luck asymmetry"	**Supported (corrected Oct. 2026)**
I. We know less than we think	**Smith (1776)**	"very apt to over-work themselves", Book I, ch. 8	md (Cannan, I.8): "Workmen … when they are liberally paid by the piece, are very apt to over-work themselves, and to ruin their health"	*Supported*
I. We know less than we think	**Bloom & Van Reenen (2007)**	structured management (target-setting, monitoring, incentives) correlates robustly with productivity across countries	p. 2: "732 medium-sized firms in the United States, France, Germany, and the United Kingdom … strongly associated with firm-level productivity"; p. 12: "monitoring … targets … incentives"	*Supported*
I. We know less than we think	**Artz & Heywood (2015)**	panel data: the move to performance pay is associated with an elevated risk of workplace injury	p. 1: "injury risk increases substantially when blue-collar (manual) workers become paid by piece rates and bonuses"	*Supported*
I. We know less than we think	**Andersson et al. (2021)**	a Scandinavian tradition of decentralisation and trust; historically tied to highly skilled/high-status work; Hällstén & Tengblad 2006's four pairs	p. 3: "long tradition of decentralized organizations … trustful relationships between managers and workers"; p. 18: "traditionally been related to industries with high-skilled and high-status workers"; p. 6: "trust and openness, community spirit and cooperation, commitment and purpose, and responsibility and initiative"	*Supported*
I. We know less than we think	**Healy & Palepu (2003)**	Enron: creative revenue recognition driven by stock and bonus incentives	H&P (DA re-measured): "bonus" 2 hits, both about analysts; on management: "Heavy use of stock option awards linked to short-term stock price"	**Supported (corrected Oct. 2026)**
II. The human being the model forgot	**Holmström (1979)**	the informativeness principle as the yardstick for what pay should be based on	p. 12: "a signal is valuable if and only if it is informative"	*Supported*
II. The human being the model forgot	**Osterloh & Frey (2000)**	intrinsic motivation is the decisive channel when tacit knowledge is to be shared	p. 1: "Intrinsic motivation is crucial when tacit knowledge in and between teams must be transferred"	*Supported*
II. The human being the model forgot	**Gerhart & Fang (2015)**	workplace studies paint a milder picture of crowding out	p. 14: "effect size in the field/workplace settings … roughly twice as large as … laboratory studies"; "tasks having more intrinsic interest … nearly identical"	*Supported*

Afterword (111 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
II. The human being the model forgot	**Bandiera et al. (2005)**	social preferences showed up in the production data	p. 2: "This paper uses personnel data to present evidence on social preferences in the workplace"	*Supported*
II. The human being the model forgot	**Cameron & Pierce (1994)**	meta-analysis: the effect is limited to particular conditions	p. 2: "overall, reward does not decrease intrinsic motivation … The only negative effect appears when expected tangible rewards are given to individuals simply for doing a task"	*Supported*
II. The human being the model forgot	**Eisenberger & Cameron (1996)**	limited to particular conditions	p. 1: "detrimental effects of reward occur under highly restricted, easily avoidable conditions"	*Supported*
II. The human being the model forgot	**Weibel et al. (2010)**	a positive effect for routine tasks, hidden costs for interesting tasks	p. 12 (table 2): "Noninteresting tasks … 0.42***; Interesting tasks … –0.13***"; p. 2: "it almost always produces hidden costs of rewards"	*Supported*
II. The human being the model forgot	**Kerr (1975)**	rewarding A while hoping for B; e.g. individual results vs collaboration, short-term figures vs long-term	p. 8: "rewards are distributed according to individual performance … rational for players to think of themselves first, and the team second"; "pay off for short run sales and earnings only"	*Supported*
II. The human being the model forgot	**Ferguson (2025)**	raters overreact to noisy outcomes; sharply lower ratings and increased exit at marginal outcomes	p. 1: "supervisors over-react to negative outcomes, sharply lowering performance ratings and tripling subordinate turnover"	*Supported*
II. The human being the model forgot	**Miller & Ross (1975)**	people attribute success to their own ability and failure to circumstances	M&R abstract (DA re-measured): "some support … self-enhancing attributions under conditions of success, but only minimal evidence … self-protective attributions under conditions of failure"	**Supported (corrected Oct. 2026)**
II. The human being the model forgot	**Ferguson (2025)**	(a) Ferguson is cited with the year 2024	The archive file's front page (rendered): The Accounting Review Vol. 100, No. 2, March 2025, pp. 133–159; Early Access November 2024	**Supported (corrected Oct. 2026)**
II. The human being the model forgot	**Holmström & Milgrom (1991)**	multitasking: strong incentives move effort to where the measurement is	OCR-sidecar: "if volume of output is easy to measure but the quality is not, then a system of piece rates for output may lead agents to increase the volume of output at the expense of quality"	*Supported*
II. The human being the model forgot	**Chung et al. (2021)**	"daily rather than monthly quotas" change salespeople's behaviour	Chung et al. (DA re-measured): "changed the sales compensation scheme from a monthly to a daily quota plan … from a less-frequent (monthly) to a frequent (daily)"	**Supported (corrected Oct. 2026)**
III. There are other theories than principal-age…	**Benson et al. (2019)**	sales organisations promote the best salespeople, who become poorer managers	p. 1: "microdata on the performance of sales workers at 131 firms, we find evidence consistent with the Peter Principle"; p. 4: "marginally promoted high sales workers will be worse managers"	*Supported*
III. There are other theories than principal-age…	**Holmström & Milgrom (1991)**	the unmeasured disappears; the value of the measured also falls	OCR-sidecar: "it may be optimal to provide no quantity incentives when quality is poorly measured"; "increase the volume of output at the expense of quality"	*Supported*
III. There are other theories than principal-age…	**Lazear & Rosen (1981)**	the conditions for a tournament (common tailwind must dominate individual noise, etc.)	p. 17: "the common noise drops out of a rank-order comparison because it affects both contestants similarly"	*Supported*
III. There are other theories than principal-age…	**Milgrom & Roberts (1988)**	the concept of "influence activities" is due to M&R 1988	p. 2: "Members of organizations spend considerable time, effort, and ingenuity attempting to influence decision makers. Such influence activities may bring benefits …"	*Supported*
III. There are other theories than principal-age…	**Roethlisberger & Dickson (1939)**	Bank Wiring Room: output norms enforced by social sanctions against those who worked too fast	p. 558: "You should not turn out too much work. If you do, you are a 'ratebuster'"; p. 643 (index): "'Binging' … as means of regulating output, 422-23"	*Supported*

Afterword (111 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
III. There are other theories than principal-age…	**Rosen (1986)**	elimination tournament: the top prize must be disproportionately large, otherwise there is nothing to play for for those who have won the early rounds	p. 2: "rest on their laurels in attempting to climb higher, unless top-ranking prizes are given a disproportionate weight in the purse"	*Supported*
III. There are other theories than principal-age…	**Roy (1952)**	participant observation, American machine shop; collective quota restriction; sanctions against norm breakers	p. 2: "participant observation … group adherence to a 'bogey' … the work group was restricting production day in and day out"; p. 5: "I was subject to warnings and predictions concerning price cuts. Pressure was the heaviest from Joe"	*Supported*
III. There are other theories than principal-age…	**Charness et al. (2011)**	a single employer → output restriction; it disappears under competition	p. 1: "substantial ratchet effects in the absence of competition, which are nearly eliminated when competition is introduced"	*Supported*
III. There are other theories than principal-age…	**Conyon et al. (2001)**	pay structures are convex; the gap widens towards the top, largest at the jump to the executive board	p. 1: "a convex relationship between executive pay and organizational level"; p. 6: "the ratio of level 1 pay to level 2 pay is greater than the ratio of level 2 pay to level 3 pay"	*Supported*
III. There are other theories than principal-age…	**Fairburn & Malcomson (2001)**	influence activities in the promotion game	p. 3: "indulge in other types of influence activities discussed in Milgrom (1988) and Milgrom and Roberts (1988)"; p. 2: "use of promotion reduces the incentive for managers to be affected by influence activities"	*Supported*
III. There are other theories than principal-age…	**Gibbons (1987)**	ratchet: withheld output as the equilibrium when the employer cannot commit	p. 2: "if neither the firm nor the worker can commit to future behavior, then no compensation scheme, piece-rate or otherwise, can induce the worker not to restrict output"	*Supported*
III. There are other theories than principal-age…	**Harbring (2010)**	tournaments leave less trust than team schemes (experiment)	WP p. 1: "trust … positively affected by experiencing cooperation in a team setting compared to being exposed to a tournament scheme. The expectation of trust is even decreased by the tournament"	*Supported*
III. There are other theories than principal-age…	**Prendergast (1999)**	four tournament conditions "collected in Prendergast"	p. 29: "since individuals are evaluated on how well they do relative to others, they are unlikely to help their competitors"; p. 30: "relative performance should be used in situations where there is common risk"	*Supported*
III. There are other theories than principal-age…	**Baker et al. (1994)**	a relational contract is self-enforcing when the future value exceeds the gain from breaking it	p. 3: "an implicit contract could also be called a self-enforcing contract"	*Supported*
III. There are other theories than principal-age…	**Holmström (1982)**	free-riding as the equilibrium of the team bonus; the team cannot solve it from within; budget breaker	p. 3: "the principal's primary role is to break the budget-balancing constraint"; p. 2: "free-rider problem implies a new role for the principal"	*Supported*
III. There are other theories than principal-age…	**Kandel & Lazear (1992)**	peer pressure can carry what the contract cannot	p. 2: "This analysis explores how peer pressure operates and how … profit sharing, shame, guilt, norms, mutual monitoring, and empathy interact to create incentives"	*Supported*
III. There are other theories than principal-age…	**Milgrom & Roberts (1992)**	pp. 367 and 382–384: the partner track in law/accounting as a promotion tournament, up-or-out	mathpix: "Tournaments … promoting the best performers to higher-paying jobs is a particular kind of comparative performance evaluation"; "these practices are used in many professional partnerships in law, accounting … those who are not admitted to partnership are let go"	*Supported*
III. There are other theories than principal-age…	**Baker et al. (2002)**	relational contracts, repeated games	p. 2: "Relational contracts—informal agreements sustained by the value of future relationships"; p. 3: "the value of the future relationship must be sufficiently large that neither party wishes to renege"	*Supported*

Afterword (111 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
III. There are other theories than principal-age…	**Balliet et al. (2011)**	reward and punishment work most strongly in stable groups over time	p. 11: "punishment–cooperation association was stronger in the iterated dilemmas with partner matching (d = 0.92) … Similarly, the rewards–cooperation association was stronger during iterated dilemmas"	*Supported*
III. There are other theories than principal-age…	**Corgnet et al. (2015)**	weak, anonymous peer insight lifted team pay to the level of individual pay	p. 3: "very weak form of peer monitoring (anonymous and without physical proximity …) perform as well as those using individual incentives"	*Supported*
III. There are other theories than principal-age…	**Deb et al. (2016)**	no static contract makes both effort and peer evaluation add up; only a repeated relationship carries it	p. 1: "effort incentives cannot be decoupled from truth-telling incentives. This makes the optimal static contract inefficient. Relational contracts … increase efficiency"	*Supported*
III. There are other theories than principal-age…	**DiMaggio & Powell (1983)**	institutional isomorphism; organisational field; three pathways (mimetic, normative, coercive)	p. 5: "1) coercive isomorphism … 2) mimetic isomorphism resulting from standard responses to uncertainty; and 3) normative isomorphism, associated with professionalization"	*Supported*
III. There are other theories than principal-age…	**Galanter & Palay (1991)**	the partner track in large law firms as a regular promotion tournament	Freyer review p. 2: "Galanter and Palay explain the big firm's growth in terms of the 'promotion-to-partner tournament'"; Spangler p. 3: "The partnership decision—a 'tournament,' in Galanter and Palay's terms"	*Supported*
III. There are other theories than principal-age…	**Baker et al. (1994)**	objective/subjective measures reinforce each other up to a point; near-perfect objective measures kill the implicit agreement	p. 3: "if the objective measure is sufficiently close to perfect, then no implicit contract is feasible"; p. 1: "in some circumstances objective and subjective measures are complements"	*Supported*
III. There are other theories than principal-age…	**Franco-Santos & Otley (2018)**	a catalogue of unintended consequences	p. 1 (see line 18/31)	*Supported*
III. There are other theories than principal-age…	**Locke & Latham (2009)**	reply to Ordóñez et al.	title: "Has Goal Setting Gone Wild, or Have Its Attackers Abandoned Good Scholarship?"	*Supported*
IV. What matters most cannot be counted: knowled…	**Polanyi (1966)**	"we know more than we can tell"; the pianist who begins to think about her fingers	Doubleday p. 4 (own OCR of a scan, pdf p. 10): "we can know more than we can tell"; p. 18 (pdf p. 24): "By concentrating attention on his fingers, a pianist can temporarily paralyze his movement"	*Supported*
IV. What matters most cannot be counted: knowled…	**Polanyi (1966)**	the whole is lost when attention is forced down into the parts	Doubleday p. 18 (pdf p. 24): "Scrutinize closely the particulars of a comprehensive entity and their meaning is effaced, our conception of the entity is destroyed"	*Supported*
IV. What matters most cannot be counted: knowled…	**Gourlay (2006)**	critics challenged the evidence base and the conversion thesis	p. 1: "Three of the modes appear plausible but none are supported by evidence that cannot be explained more simply"	*Supported*
IV. What matters most cannot be counted: knowled…	**Nonaka (1994)**	SECI; conditions: autonomy, redundancy, creative chaos	p. 5: "four different 'modes' of knowledge conversion"; p. 14: "enabling conditions—creative chaos, redundancy of information, and requisite variety"; p. 4: "'intention,' and 'autonomy,' and … 'fluctuation'"	*Supported*
IV. What matters most cannot be counted: knowled…	**Nonaka & Konno (1998)**	one ba for each phase	p. 8: "Each ba supports a particular conversion process"; fig. 3: Originating/Interacting/Cyber/Exercising Ba	*Supported*
IV. What matters most cannot be counted: knowled…	**Nonaka & Takeuchi (1995)**	SECI; the bread-making machine example	`ls PM-artikler-og-boeger	*Supported via secondary source*

Afterword (111 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
IV. What matters most cannot be counted: knowled…	**Nonaka et al. (2000)**	four ba (originating, dialoguing, systemising, exercising); four knowledge assets; "only the systemic assets can be readily inventoried, counted and transferred; the other three are either tacit and embodied"	NTK 2000 (DA re-measured): "Conceptual knowledge assets consist of explicit knowledge … Since they have tangible forms, conceptual knowledge assets are easier to grasp than experiential"	**Supported (corrected Oct. 2026)**
IV. What matters most cannot be counted: knowled…	**Nonaka & Krogh (2009)**	the originators responded with clarifications	p. 1: "analyze the debate on organizational knowledge creation theory and suggest how the controversies surrounding it might be resolved"	*Supported*
IV. What matters most cannot be counted: knowled…	**Schulze & Hoegl (2008)**	later studies found empirical support for the processes	p. 1: "Using data from multiple respondents in 33 companies, our results confirm the proposed linkages"	*Supported*
IV. What matters most cannot be counted: knowled…	**Berger et al. (2019)**	the combination of RPI and individual incentives led participants to share less and to share deliberately misleading knowledge	Berger et al. abstract (DA re-measured): "most frequently when they receive RPI and are assigned individual performance-based incentives"; but "active counterproductive behavior is more frequent when individual performance-based incentives are absent"	**Supported (corrected Oct. 2026)**
IV. What matters most cannot be counted: knowled…	**Cabrera & Cabrera (2002)**	knowledge sharing as a prisoner's dilemma (the sharer bears the cost, the gain is dispersed)	mathpix-sidecar: "sharing personal insights with one's co-workers may carry a cost … which may yield, at the aggregate level, a co-operation dilemma, similar to a public-good dilemma"	*Supported*
IV. What matters most cannot be counted: knowled…	**Evans et al. (2015)**	hoarding benefits the individual's position and harms the unit's performance	p. 1: "knowledge hoarding increases an individual's job performance by enhancing bargaining power … detrimental to unit performance"	*Supported*
IV. What matters most cannot be counted: knowled…	**Grant (1996)**	the firm's basic function is to integrate specialised knowledge	p. 1: "the firm is conceptualized as an institution for integrating knowledge … integrate the specialist knowledge of their members"	*Supported*
V. Who owns the luck?	**Baker et al. (1994)**	subjective judgement can capture what the formula does not see	p. 3: "subjective assessments … may complement or improve on the available objective measures"	*Supported*
V. Who owns the luck?	**Holmström (1979)**	the informativeness principle	p. 3: "any additional information about the agent's action, however imperfect, can be used to improve the welfare"	*Supported*
V. Who owns the luck?	**Tice (2023)**	RPE does not capture individual bad luck; works best when common risk dominates	p. 1: "the benefit of using RPE exceeds the cost of adding noise from peers when the amount of common risk removed is large"; "peer performance captures common risk together with noise"	*Supported*
V. Who owns the luck?	**Wu et al. (2025)**	firms exposed to common shocks use more RPE in top-management contracts	p. 1: "firms in industries positioned more centrally or upstream use RPE more frequently and base greater fractions of CEO pay on RPE"	*Supported*
V. Who owns the luck?	**Asay et al. (2022)**	a plan that adjusts for luck, found reasonable ex ante, is experienced ex post as fairer by the unlucky and less fair by the lucky	p. 1: "Individuals who experience bad luck believe their compensation is fairer if the compensation plan limits the effect of luck … individuals who experience good luck believe their compensation is less fair"	*Supported*
V. Who owns the luck?	**Bol et al. (2015)**	managers shield against bad luck; fear of precedent and demotivation	p. 2: "an adjustment can also set a precedent for subordinates"; p. 8: "The demotivating impact of an adjustment for one employee on other employees is likely to be the manager's most dominant consideration"	*Supported*
V. Who owns the luck?	**Ferguson (2025)**	ratings on the most incomplete objective measures are the most exposed to outcome bias	p. 1: "evaluations that subjectively incorporate information from more incomplete objective performance measures are more prone to outcome bias"	*Supported*

Afterword (111 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
V. Who owns the luck?	**Fischhoff (1975)**	hindsight: the outcome is remembered as foreseen	p. 1: "overestimated what they would have known without outcome knowledge"	*Supported*
V. Who owns the luck?	**Konow (2000)**	people should be rewarded for what they can affect, not for chance (accountability)	p. 2: "the accountability principle requires that a person's fair allocation (e.g., of income) vary in extent …"	*Supported*
V. Who owns the luck?	**Langer (1975)**	we overestimate our control over chance	p. 1: "expectancy of a personal success probability inappropriately higher than the objective probability would warrant"	*Supported*
V. Who owns the luck?	**Marshall & Mowen (1993)**	outcome bias in sales appraisals	p. 1: "An Experimental Investigation of the Outcome Bias In Salesperson Performance Evaluations"	*Supported*
V. Who owns the luck?	**Miller & Ross (1975)**	success to ourselves, failure to circumstances	as line 56: "only minimal evidence … self-protective attributions under conditions of failure"	**Supported (corrected Oct. 2026)**
V. Who owns the luck?	**Roese & Vohs (2012)**	hindsight bias	p. 1: "Hindsight bias occurs when people feel that they 'knew it all along'"	*Supported*
V. Who owns the luck?	**Bol & Smith (2011)**	asymmetry: compensates for bad luck, does not punish good luck	publisher abstract: "evaluations are higher when an uncontrollable factor decreases the subordinate's sales (i.e., they compensate for bad luck), but are not lower when … increases"	*Supported*
V. Who owns the luck?	**Bertrand & Mullainathan (2001)**	CEO pay follows oil/exchange rates/the business cycle; most where ownership is weak	p. 4: "An additional large shareholder on the board reduces pay for luck by between 23 and 33 percent"	*Supported*
V. Who owns the luck?	**Gabaix & Landier (2008)**	the dominance of size may reflect a competitive market for scarce talent	p. 2: "CEOs have different talents and are matched to firms in a competitive assignment model … pay depends on both the size of his firm and the aggregate firm size"	*Supported*
V. Who owns the luck?	**Ning et al. (2024)**	(a) a tighter coupling makes the payment for luck larger "and still asymmetric"; (b) the evidence shows asymmetry	as l. 37	**Supported (corrected Oct. 2026)**
V. Who owns the luck?	**Oyer (2004)**	market-dependent pay retains staff without costly renegotiation	p. 1: "employees' outside opportunities are correlated with their firms' performance"; "both turnover and adjusting the pay scheme parameters are costly"	*Supported*
V. Who owns the luck?	**Townley (1993)**	appraisal has shaped what a measurable employee is	p. 4: "The process of making something known or visible … also makes it potentially governable"; p. 13: "a method by which the powerful are helped to observe the less powerful"	*Supported*
VI. Theories do not travel freely	**Kato & Kauhanen (2018)**	European evidence: modest, design-dependent gains	see line 35	*Supported*
VI. Theories do not travel freely	**Lucifora & Origo (2015)**	ditto	p. 1: "3 to 5% productivity gain"	*Supported*
VI. Theories do not travel freely	**Bloom & Van Reenen (2010)**	multinationals carry management systems across borders	p. 3: "multinationals are generally well managed in every country. They also transplant their management styles abroad"	*Supported*
VI. Theories do not travel freely	**Bebchuk & Tallarita (2022)**	vague ESG bonuses can end up as more discretion for the executive board	p. 6: "danger of creating vague, opaque, and easy-to-manipulate compensation components, which self-interested CEOs can exploit"	*Supported*
VI. Theories do not travel freely	**Flammer et al. (2019)**	ESG targets in executive pay increase long-term orientation and environmental performance	p. 1: "adoption of CSR contracting leads to (a) an increase in long-term orientation … (d) a reduction in emissions; and (e) an increase in green innovations"	*Supported*
VII. The truce: performance management as negoti…	**Cyert & March (1963)**	coalition, quasi-resolution of conflict	ch. 3, 3.1.1 "Let us view the organization as a coalition"; 3.2.2 bargaining, side payments, mutual control-systems	*Supported*

Afterword (111 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
VII. The truce: performance management as negoti…	**Ouchi (1979)**	when neither the process can be surveyed nor the outcome measured → clan control	p. 12: "unable to use either behavior or output measurement … the organization relies heavily on ritualized, ceremonial forms of control"	*Supported*
VII. The truce: performance management as negoti…	**Donaldson & Preston (1995)**	stakeholders with legitimate claims	p. 4: "Stakeholders are persons or groups with legitimate interests in procedural and/or substantive aspects of corporate activity"	*Supported*
VII. The truce: performance management as negoti…	**Fox (1974)**	unitarist vs pluralist	`ls	**No archive file**
VII. The truce: performance management as negoti…	**Freeman (1984)**	stakeholder theory	`ls	**No archive file**
VII. The truce: performance management as negoti…	**Nelson & Winter (1982)**	routines as a truce	ch. 5, section 2 "Routine as Truce": "truce between the supervisor and those supervised … the usual amount of work gets done, reprimands and compliments are delivered with the usual frequency"	*Supported*
VII. The truce: performance management as negoti…	**Magee & Galinsky (2008)**	status/power hierarchies are self-reinforcing and slow to change	p. 1: "explain why status and power hierarchies tend to be self-reinforcing"; p. 5: "Once set up, formal hierarchies tend to be relatively inert because it is costly to change"	*Supported*
VII. The truce: performance management as negoti…	**Sapolsky (2004)**	dominance hierarchies in numerous species; position shapes quality of life and health	p. 2: "Dominance hierarchies exist in numerous social species, and rank in such hierarchies can dramatically influence the quality of an individual's life"	*Supported*
VII. The truce: performance management as negoti…	**Magee & Galinsky (2008)**	overview of why power and status are self-reinforcing	title: "Social Hierarchy: The Self-Reinforcing Nature of Power and Status"	*Supported*
VII. The truce: performance management as negoti…	**Sapolsky (2004)**	the pecking order gets under the skin — in baboons as in humans	p. 8: "Among wild baboons, subordinate animals have been found to have both excessive basal secretion of glucocorticoids"	*Supported*
VII. The truce: performance management as negoti…	**Baker et al. (1994)**	trust carries the implicit layer of the relational contract	p. 3: "an implicit contract could also be called a self-enforcing contract" (reputation)	*Supported*
VII. The truce: performance management as negoti…	**Cyert & March (1963)**	renegotiation is political; coalitions	ch. 3, 3.1.1 "Let us view the organization as a coalition"; 3.2.2 bargaining, side payments, mutual control-systems	*Supported*
VII. The truce: performance management as negoti…	**Harbring (2010)**	the choice of incentive form can erode trust (experimentally)	WP p. 1: "The expectation of trust is even decreased by the tournament competition"	*Supported*

Appendix A — Mathematical Derivations (9 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
Jensen's argument for linearity	**Jensen (2003)**	(a) Jensen argues for linear profiles, because kinks (thresholds, caps) create gaming; (b) below the threshold: give up or postpone effort ("give up"); (c) above the cap: stop or save for the next period ("ratchet"); (d) near the kink: manipulate timing/reporting; (e) a linear profile removes the problem, because the marginal incentive is constant	p. 388: "any time managers are within shooting distance of a kink … the firm is rewarding them for taking actions that are harmful"; p. 387: "When managers conclude that they cannot make the minimum hurdle … move profits … from the present to the future"; p. 388: "within reach of the bonus cap have incentives to not exceed the maximum … move expenses from the future to the present and revenues from the present to the future"; p. 380: "taking all kinks, discontinuities and non-linearities out of the pay-for-performance profile … provide no incentives to lie … or to game the system"	*Supported*
The principle's formal basis	**Holmström (1979)**	(a) the optimal contract should condition on all signals informative about effort; (b) formally: y should enter if and only if PM is not a sufficient statistic for (PM, y) with respect to e; (c) y is used even though it does not directly measure what the principal values	p. 84: "x is a sufficient statistic for the pair (x,y) with respect to a, which means that x carries all the relevant information about a"; p. 84, Proposition 3: "there exists a sharing rule s(x,y) which strictly Pareto dominates s(x) if and only if (17) is false; … a signal is valuable if and only if it is informative"	*Supported*
The Equal Compensation Principle	**Holmström & Milgrom (1991)**	(a) HM 1991 derives the result (equal marginal reward for positive effort on both tasks, substitutes); (b) $\beta_A = \beta_B$ for symmetric tasks	p. 33: "when effort in the two activities are perfect substitutes in the agent's cost function … the incentive constraint in (3) implies that $\alpha 1 = \alpha 2$ (intuitively, the agent must equate the marginal return to effort in various tasks)"; p. 33: "the only way to provide incentives for t2 is to reduce $\alpha 1$, as (7) shows"	*Supported*
The Equal Compensation Principle	**Milgrom & Roberts (1992)**	(a) MR 1992 named "the equal compensation principle"; (b) pp. 228 ff.	Table of contents: "The Equal Compensation Principle 228"; p. 228: "The Equal Compensation Principle: If an employee's allocation of time or attention between two different activities cannot be monitored … the marginal rate of return … must be equal"; chapter notes: "the other principles of incentive pay borrow heavily from the work of Bengt Holmstrom and Paul Milgrom" (HM 1991 i the reference list)	*Supported*
Setup (Lazear and Rosen, 1981)	**Lazear & Rosen (1981)**	(a) two agents compete for one promotion; $P_i = e_i + \varepsilon_i$; winner prize W, loser prize L; (b) probability of winning = $G(e_i - e_j)$; FOC $g(e_i - e_j)(W-L) = c'(e_i)$; (c) symmetric Nash equilibrium $g(0)\cdot\Delta W = c'(e^*)$; (d) normally distributed noise: $g(0) = 1/(2\sigma\sqrt{\pi})$; (e) more noise ⇒ larger optimal prize spread; (f) common noise is filtered out (variance $2\sigma^2$ vs. $\sigma^2+\sigma^2_\eta$)	p. 844: "two-player tournaments in which the rules of the game specify a fixed prize W1 to the winner and a fixed prize W2 to the loser"; p. 845: "$(W1 - W2)g(\mu j - \mu k) - C'(\mu j) = 0$ (5)"; p. 846: "$C'(\mu i) = (W1 - W2)g(0)$, i = j,k (6)"; p. 847 (rendered page): "if ε is normal with variance σ^2, then $g(0) = 1/(2\sigma\sqrt{\pi})$. It follows from (10) that the optimal spread varies directly with V and σ^2"; p. 856: "the common noise drops out of a rank-order comparison … the relevant variance for the contest is $2\sigma^2_\varepsilon$, while that for the piece rate is $\sigma^2_\varepsilon + \sigma^2_v$"	*Supported*
Lazear's model (1979, 1981)	**Lazear (1979)**	(a) $W(t) < V(t)$ before the crossover, $W(t) > V(t)$ after; (b) total (present-value) compensation equals productivity; (c) the incentive comes from the loss of future "overpayment" on dismissal; (d) requires credible commitment (the firm must not dismiss opportunistically); (e) mandatory retirement is necessary, because $W > V$ late in the career; (f) a long time horizon	p. 1265: "This worker is receiving an amount less than his VMP for $t < t^*$ and an amount greater than his marginal product for $t > t^*$"; p. 1267: "he has been paid exactly the full present value of his lifetime VMP at point T"; p. 1267: "The major cost of cheating is the loss of the current job which carries with it earnings greater than the individual's reservation wage"; p. 1267: "Firm 'cheating' takes the form of promising a worker a stream W*(t) from 0 to T, but dismissing the honest worker at some $t < T$"; p. 1267: "once at T, the worker would prefer to continue working at W*(T) if it were available"	*Supported*

Appendix A — Mathematical Derivations (9 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
Lazear's model (1979, 1981)	**Lazear (1981)**	the same model claims as above (deferred pay profile, PV equality, incentive via the loss on dismissal, firm default)	p. 607: "one which pays less than his marginal product initially and more than his marginal product at the end of his working career so long as the present value of the two streams is the same"; p. 607: "The most obvious form of deviation manifests itself as unanticipated termination of the worker's labor contract before time T"; p. 608: "Steeper profiles increase worker effort while flatter profiles will tend to make firms more honest"; p. 609: "the firm essentially is borrowing from the worker by paying him less than VMP when he is young and repaying him by paying more than VMP when old"	*Supported*
The Hirshleifer result	**Hirshleifer (1956)**	(a) Hirshleifer showed that the firm-optimal transfer price is TP* = MC(q*); (b) derivation: total profit is maximised where MC = p – s	p. 172: "where no market for the transferred commodity exists, the correct procedure is to transfer at marginal cost (given certain simplifying conditions)"; p. 175: "The result in this section may be considered marginal cost pricing for the intermediate product, since p* = mmc"; p. 178: "the correct transfer price to achieve the maximum-profit result is p* = OA = mmc"; p. 183: "If the market for the intermediate commodity is imperfectly competitive, transfer price should be at the marginal costs of the selling division"	*Supported*
The Agent's Equilibrium Wage	**Rosen (1986)**	(a) compensating wage differentials for job characteristics (discomfort, insecurity, inflexibility); (b) empirically well documented	p. 641: "jobs offering unfavorable working conditions must pay premiums as offsetting compensation in order to attract workers. Measurable job attributes on which compensating wage differentials have been shown to arise empirically include: (i) onerous working conditions, such as risks to life and health"; p. 642: "(iii) special work-time scheduling … shift work, inflexible work schedules, and possible risks of layoff and subsequent unemployment"	*Supported*

Appendix B — Overview of Key Theories (68 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
Contract Theory and Principal-Agent Models	**Jensen & Meckling (1976)**	separation of ownership and control → conflict of interest; the agent maximises his own utility	p4: "If both parties to the relationship are utility maximizers there is good reason to believe that the agent will not always act in the best interests of the principal"; p23: "the costs of the 'separation of ownership and control'"	*Supported*
Contract Theory and Principal-Agent Models	**Holmström (1979)**	effort unobservable; the optimal contract conditions pay on an informative measure	p2: "individual actions cannot be observed and hence contracted upon"; p12: "a signal is valuable if and only if it is informative"	*Supported*
Contract Theory and Principal-Agent Models	**Holmström & Milgrom (1987)**	under CARA + normally distributed noise the optimal contract is linear	p2: "providing incentives over time for an agent with constant absolute risk aversion. The optimal compensation scheme is found to be a linear function"; p4: "exponential utility ... the optimal incentive scheme will indeed be linear in output"	*Supported*
Contract Theory and Principal-Agent Models	**Holmström & Milgrom (1987)**	risk premium $\frac{1}{2}R\beta^2\sigma^2$, quadratic in β	p22, eq. (29): the agent's certainty equivalent "$\alpha\mu + \beta - (k/2)\mu^2 - (r/2)\alpha^2\sigma^2$"	*Supported*

Appendix B — Overview of Key Theories (68 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
Contract Theory and Principal-Agent Models	**Milgrom & Roberts (1992)**	$\beta^* = 1/(1+R\cdot\sigma^2\cdot C'')$; depends on risk aversion, noise, responsiveness and the value of effort	mathpix (ch. 7, "The incentive intensity principle"): "the formula for the optimal intensity is: $\beta = P'(e)/(1 + r\ V\ C''(e))$"; "four factors: the incremental profits created by additional effort, the precision ..., the agent's risk tolerance, and the agent's responsiveness"	*Supported*
Contract Theory and Principal-Agent Models	**Holmström (1979)**	a signal is included if and only if it is informative beyond the existing measures	p12: "a signal is valuable if and only if it is informative"; p14 (note 4): "where one already observes a signal y ... the value of an additional signal y2. The necessary and sufficient condition becomes ..."	*Supported*
Contract Theory and Principal-Agent Models	**Holmström & Milgrom (1991)**	strong incentives on measurable tasks distort effort away from unmeasurable ones; balance required	p4: "an increase in an agent's compensation in any one task will cause some reallocation of attention away from other tasks"; p4: "the desirability of providing incentives for any one activity decreases with the difficulty of measuring performance in any other activities"	*Supported*
Contract Theory and Principal-Agent Models	**Holmström & Milgrom (1991)**	with substitutable tasks the marginal reward must be equalised	p11: "when inputs are substitutes, incentives for any given activity can be provided either by rewarding that activity or by reducing its opportunity cost"	*Supported*
Contract Theory and Principal-Agent Models	**Milgrom & Roberts (1992)**	Named the "equal-compensation principle"; originated with Holmström & Milgrom	mathpix ch. 7: "The Equal Compensation Principle: If an employee's allocation of time or attention between two different activities cannot be monitored ..., then either the marginal rate of return ... must be equal"; bibliographic notes ch. 7: "our discussions of optimal linear incentive contracts and the other principles of incentive pay borrow heavily from the work of Bengt Holmstrom and Paul Milgrom"	*Supported*
Contract Theory and Principal-Agent Models	**Lazear (1979)**	pay below VMP early, above it later; incentive via the loss on dismissal	p2: "preferable to pay workers less than VMP when young and more than VMP when old"; p9: "if the worker 'cheats,' assume that he is caught with certainty and that as a result he is terminated"	*Supported*
Contract Theory and Principal-Agent Models	**Lazear & Rosen (1981)**	promotions as tournaments; the prize spread determines incentive intensity	p5: "a worker's incentives to invest increase with the spread between winning and losing prizes, W1 − W2"; p8: "presidents are often chosen from the ranks of vice-presidents ... his salary may triple"	*Supported*
Contract Theory and Principal-Agent Models	**Hvide (2002)**	Self-chosen risk -> maximum risk, minimum effort ("risky-lazy trap"); benchmark contracts restore effort	p1: "The unique equilibrium induces excessive risk taking and a low level of effort"; p7, Prop. 1: "infinite variance and zero effort"; p3: "the risky-lazy 'trap' ... agents are ranked according to the relative closeness of their output to a benchmark k ... can provide incentives for working hard"	*Supported*
Contract Theory and Principal-Agent Models	**Holmström (1999)**	without explicit contracts, agents are motivated by reputation/career	p1: "There are no explicit output-contingent contracts, but ... an 'implicit contract' links today's performance to future wages"; p2: "career concerns induce efficient managerial behaviour"	*Supported*
Contract Theory and Principal-Agent Models	**Baker et al. (1994)**	subjective measures compensate for the shortcomings of objective measures; require credible commitment	p1: "subjective components that mitigate incentive distortions caused by imperfect objective measures"; p3: "an implicit contract cannot [be enforced by a court], and so is vulnerable to reneging by the firm"; p6: "the bonus must be sufficiently small that the firm has no incentive to renege"	*Supported*

Appendix B — Overview of Key Theories (68 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
Contract Theory and Principal-Agent Models	**Prendergast & Topel (1996)**	Supervisors have a taste for exercising bias; whether it harms or benefits depends on distortion in the "market" for favouritism; the right to favour has value and can make the manager's own pay cheaper	p3: "supervisors derive utility from exercising bias"; p4: "favoritism can yield low-powered incentives ... but only if significant distortions can be found in the market for favoritism"; p8: "the ability to control the fate of subordinates is a form of 'power' that supervisors value"; p12: "A. Selling the Rights to Exert Bias"	*Supported*
Contract Theory and Principal-Agent Models	**Antle & Demski (1988)**	(a) employees should be held accountable only for what they control; (b) tension with informativeness	A&D abstract (the archive's page image + note 30-09): they EXAMINE the principle and find that "the optimal agency solution bears [no] logical relation to a casual definition of controllability"	**Supported (corrected Oct. 2026)**
Compensation, Pay and Reward	**Jensen (2003)**	kinks/thresholds/caps → gaming; linear profiles remove the distortion	p1: "taking all kinks, discontinuities and non-linearities out of the pay-for-performance profile ... purely linear compensation formulas provide no incentives to lie ... or to game the system"; p. 9: a hurdle at 80 %, "capped at some maximum (120% ...)"	*Supported*
Compensation, Pay and Reward	**Lazear (2000)**	Piece rates produce a motivation effect (higher output) and a selection effect ("the low-productivity leave")	Lazear 2000 (DA re-measured): "none of the low-output incumbents should leave since the guarantee makes them no worse off"; "Most of the increase in ability is a result of selection through the hiring process"	**Supported (corrected Oct. 2026)**
Compensation, Pay and Reward	**Lazear (2000)**	approx. half the gain = incentive effect; part of the remainder selection	p9: "Approximately half of the 44-percent difference in productivity attributed to the PPP program reflects an incentive effect"; p3: "Some of the increase results from an ability to hire the most productive workers"	*Supported*
Compensation, Pay and Reward	**Rosen (1981)**	small differences in quality × organisation size justify large pay differences for *top executives*	p3: "small differences in talent become magnified in larger earnings differences, with great magnification if the earnings-talent gradient increases sharply near the top"; p2: "a close connection between personal reward and the size of one's own market"	**Supported in substance (left as is, see evidence)**
Compensation, Pay and Reward	**Rosen (1986)**	compensating wage differentials for risk, discomfort, inflexibility	p1–2: "jobs offering unfavorable working conditions must pay premiums ... (i) onerous working conditions, such as risks to life and health ... (iii) special work-time scheduling ... including shift work, inflexible work schedules"	*Supported*
Compensation, Pay and Reward	**Hirshleifer (1956)**	optimal internal transfer price = marginal cost; ensures firm-optimal decisions	p2: "market price is the correct transfer price only where the commodity ... is produced in a competitive market ... If the market is imperfectly competitive, or where no market ... exists, the correct procedure is to transfer at marginal cost"; p13: "the transfer price must equal the marginal costs of the seller division. This is only a necessary condition"	**Supported in substance (left as is, see evidence)**
Motivation and Psychological Theory	**Deci & Ryan (2000)**	three needs (autonomy, competence, relatedness) → intrinsic motivation; extrinsic rewards can undermine it	p2: "innate psychological needs for competence, autonomy, and relatedness"; p10: "events such as rewards that foster an E-PLOC tend to undermine intrinsic motivation"	*Supported*
Motivation and Psychological Theory	**Deci & Ryan (1985)**	CET: rewards have a controlling and an informational aspect; the net effect depends on which dominates	The archive holds only the title page + a Kindle extract of ch. 3 (monetary rewards, salience) — "controlling aspect"/"informational aspect" searched in the extract: 0 hits. Confirmed in Deci, Koestner & Ryan (1999) p. 2: "rewards ... being experienced to some extent as controlling ... and to some extent as informational"; p. 3: "emphasize the informational aspect of performance-contingent rewards and to offset their controlling aspect"	*Supported*

Appendix B — Overview of Key Theories (68 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
Motivation and Psychological Theory	**Deci et al. (1999)**	tangible, expected rewards reduce intrinsic motivation; largest for participation/completion, smallest for performance-contingent; verbal praise increases it; primarily lab	p1: "engagement-contingent, completion-contingent, and performance-contingent rewards significantly undermined free-choice intrinsic motivation (d = –0.40, –0.36, and –0.28, respectively), as did ... all tangible rewards, and all expected rewards. Positive feedback enhanced both free-choice behavior (d = 0.33)"; p9: "all were done either in the laboratory or under well-controlled, laboratory-like conditions. A very small number of field studies ... were excluded"	*Supported*
Motivation and Psychological Theory	**Herzberg et al. (1959)**	hygiene factors prevent dissatisfaction; motivators create satisfaction	p138: "factors of hygiene, for they act in a manner analogous to the principles of medical hygiene ... it is not a curative; it is, rather, a preventive"; p14/p32: "'satisfiers' and ... 'dissatisfiers'"	*Supported*
Motivation and Psychological Theory	**King (1970)**	the sharp distinction is methodologically contingent	p1: "(b) another version is invalid, as its alleged empirical support merely reflects experimenter coding biases; and (c) the validities of the remaining two versions are ... indeterminate, as they have not been adequately tested in studies where defensive biases inherent in certain self-report measures are eliminated"	*Supported*
Motivation and Psychological Theory	**Locke & Latham (2002)**	specific, challenging goals increase performance via attention, energy, persistence	p2: "specific, difficult goals consistently led to higher performance"; p2: "goals serve a directive function; they direct attention and effort"; "goals have an energizing function"; p3: "goals affect persistence"	*Supported*
Motivation and Psychological Theory	**Roethlisberger & Dickson (1939)**	attention/observation allegedly increases productivity independently of physical conditions	p42–43 (Snow summary): "The output bobbed up and down without direct relation to the amount of illumination"; "necessity of controlling or eliminating the various additional factors which affected production output"	*Supported*
Motivation and Psychological Theory	**Levitt & List (2011)**	recovered the illumination data; the pattern is essentially a day-of-week effect; light changes made on Sundays, the only day off → the first day with new light = Monday	p4: "our analysis of the newly found data reveals little evidence in favor of a Hawthorne effect ... all lighting changes occurred on Sundays, the only off day for workers ... researchers seemingly misinterpreted the day of week effect with the Hawthorne effect"; p8: "all lighting changes commenced on Monday, so that facility employees would have ample time to alter the lighting arrangements on Sunday"	*Supported*
Motivation and Psychological Theory	**Mellström & Johannesson (2008)**	payment reduced donations among women; disappeared when a charity option was available	p1: "For women there is a significant crowding-out effect. The supply of blood donors decreases by almost half when a monetary payment is introduced ... allowing individuals to donate the payment to charity ... fully counteracts the crowding-out effect"	*Supported*
Motivation and Psychological Theory	**Dweck (2006)**	growth mindset promotes a learning orientation; fixed inhibits response to feedback	p23: "a fixed ability that needs to be proven, and a changeable ability that can be developed through learning"; p26: "People with a fixed mindset were only interested when the feedback reflected on their ability ... when they were presented with information that could help them learn, there was no sign of interest"	*Supported*
Motivation and Psychological Theory	**Kluger & DeNisi (1996)**	FIT: the effect depends on the level of attention; task focus works, self-focus hinders	p1: "FI effectiveness decreases as attention moves up the hierarchy closer to the self and away from the task"	*Supported*

Appendix B — Overview of Key Theories (68 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
Fairness and Organisational Justice	**Adams (1965)**	justice via comparison of input/output ratios; inequity motivates behavioural change	p14: "Inequity exists for Person whenever he perceives that the ratio of his outcomes to inputs and the ratio of Other's outcomes to Other's inputs are unequal"; p17: "the presence of inequity will motivate Person to achieve equity or to reduce inequity"	*Supported*
Fairness and Organisational Justice	**Leventhal (1980)**	distributive + procedural justice (1980)	p4: "A Multidimensional Approach to Distributive Fairness"; p24: "Six procedural justice rules are postulated"	*Supported*
Fairness and Organisational Justice	**Bies & Moag (1986)**	interactional justice (1986)	The archive file is marked "IKKE-KILDEN sekundært referat" (not the source, a secondary summary). The origin was verified in Colquitt (2001) mathpix: "The interactional justice construct was first introduced in Bies and Moag (1986)"	**No archive file**
Fairness and Organisational Justice	**Greenberg (1993)**	divides interactional into interpersonal and informational	`ls \	*Supported via secondary source*
Fairness and Organisational Justice	**Colquitt (2001)**	validates the four-factor structure	mathpix: "the best fitting model is the four-factor model" (studies 1 and 2); "Greenberg's (1993b) designations of interpersonal and informational justice"	*Supported*
Fairness and Organisational Justice	**Leventhal (1980)**	six criteria: consistency, bias suppression, accuracy, correctability, representativeness, ethicality	p24: "They are the consistency rule, bias-suppression rule, accuray [sic] rule, correctability rule, rl2resentativeness [sic] rule, and ethicality rule"	*Supported*
Fairness and Organisational Justice	**Thibaut & Walker (1975)**	voice increases perceived procedural justice, even with an unchanged outcome (T&W 1975; Folger 1977)	Folger (1977) has no entry in references.bib (DA: grep ^@.*Folger → only FolgerCropanzano1998); T&W 1975 as origin confirmed via Colquitt et al. 2001	**No archive file**
Fairness and Organisational Justice	**Akerlof (1982)**	generosity → reciprocal effort beyond the contract minimum	p2: "on the worker's side, the 'gift' given is work in excess of the minimum work standard; and on the firm's side the 'gift' given is wages in excess of what these women could receive if they left"; p8: "he reciprocates in kind"	*Supported*
Performance Measurement and System Design	**Hansen (2010)**	four transaction costs: distortion, risk, manipulation, measurement costs; the criteria pull against each other	Archive file `Hansen_(2009)_Praestationsmaalingssystemer_...pdf` (the pairing failed on the year 2009/2010, cf. bib usera). p. 1: "De fire kriterier er forvrængning, risiko, manipulation og måleomkostninger. De er alle udtryk for fire typer af [transaktionsomkostninger]"; p. 42: "afvejningerne imellem de forskellige typer af transaktionsomkostninger, der bliver centrale analysepunkter"	*Supported*
Performance Measurement and System Design	**Strathern (1997)**	"When a measure becomes a target, it ceases to be a good measure"	p4: "When a measure becomes a target, it ceases to be a good measure. ... Hoskin describes this as 'Goodhart's law'"	*Supported*
Performance Measurement and System Design	**Goodhart (1975)**	Goodhart's law (1975)	The archive file is Hennessy & Goodhart (2023), marked ANDET VAERK (= a different work). Its p. 1: "Goodhart's law that states: Any observed statistical regularity will tend to collapse once pressure is placed upon it for control purposes"	**No archive file**
Performance Measurement and System Design	**Kerr (1975)**	organisations reward the behaviour they want to avoid; the desired behaviour is not rewarded	p2: "reward systems that are fouled up in that behaviors which are rewarded are those which the rewarder is trying to discourage, while the behavior he desires is not being rewarded at all"	*Supported*
Performance Measurement and System Design	**Kaplan & Norton (1992)**	four perspectives: financial, customer, internal processes, learning/growth	K&N 1992 (read): "innovation and learning perspective"; "learning and growth" is 1996 terminology	**Supported (corrected Oct. 2026)**

Appendix B — Overview of Key Theories (68 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
Performance Measurement and System Design	**Hansen & Mouritsen (2005)**	value and coherence are retranslated in practice; the BSC as a boundary object — plastic/robust	p1: "we consider them to be phenomena that are constantly retranslated"; p5: "we analyse the BSC as what Star and Griesemer (1989: 393) call a boundary object: 'objects which are both plastic enough to adapt to local needs ... yet robust enough to maintain a common identity across sites'"	*Supported*
Performance Measurement and System Design	**Nørreklit (2000)**	The links are logical, not causal; they follow from the concepts themselves; they cannot be tested empirically; "the chain is a managerial narrative"	Nørreklit 2000 (DA re-measured): "rhetoric"/"narrative"/"story" 0 hits; "managerial narrative" is the book's own conclusion in kap04:449	**Supported (corrected Oct. 2026)**
Performance Measurement and System Design	**Ittner & Larcker (2003)**	23 % of 157 companies consistently build and verify causal models; 21 % demonstrate impact on financial results	p4: "in our survey of 157 companies, only 23% consistently built and verified causal models"; p3: "even those companies that create causal models rarely go on to prove that actual improvements in nonfinancial performance measures affect future financial results. Of the companies we surveyed, only 21% did so"	*Supported*
Performance Measurement and System Design	**Sauder & Espeland (2009)**	measures designed as neutral descriptions become active forces that reshape what is measured	p2: "rankings have changed the fundamental activities of schools, transforming ... how actors make decisions, do their jobs, and think about their schools"; p6: "the discipline rankings impose changes how law school administrators think about legal education"	*Supported*
Performance Measurement and System Design	**Latham et al. (1988)**	Participation in strategy formulation ("how") has a stronger motivational effect than participation in goal-setting ("what")	LEL 1988 (DA re-measured): "the major reason for the difference was that Erez gave very brief tell instructions …, whereas Latham used a tell and sell approach"; Locke: "I have long believed that the motivational benefits of participation are potentially far less powerful than its cognitive benefits … very few studies"	**Supported (corrected Oct. 2026)**
Performance Measurement and System Design	**Latham et al. (1988) / Latham et al. (1994)**	(a) participative ≈ tell-and-sell (1988); (b) the gain lies in the strategy and is mediated by task strategies and self-efficacy (1994)	LEL 1988 p. 768: 'pdm and the tell-and-sell styles had similar effects on goal commitment and performance'; LWL 1994 abstract: 'the strategies developed by the subjects and their self-efficacy completely mediated the effect of participation on performance' (EN archive read 15-10; the same finding is carried by DA kap03:492)	**Supported (corrected Oct. 2026)**
Coordination and Organisational Design	**Barnard (1938)**	an organisation arises when persons can communicate, are willing to contribute, and have a common purpose	mathpix ch. VII: "An organization comes into being when (1) there are persons able to communicate with each other (2) who are willing to contribute action (3) to accomplish a common purpose"	*Supported*
Coordination and Organisational Design	**Simon (1997)**	Substantive coordination = "correct individual decisions"; procedural = "decisions aligned across units"	`ls \	**No archive file**
Coordination and Organisational Design	**Hayek (1945)**	knowledge is dispersed; it cannot be centralised; markets solve this via prices	p2: "the knowledge ... never exists in concentrated or integrated form, but solely as the dispersed bits of incomplete and frequently contradictory knowledge which all the separate individuals possess"; p8: "this problem can be solved, and in fact is being solved, by the price system"	*Supported*
Coordination and Organisational Design	**Jensen & Meckling (1995)**	centralise with general knowledge; decentralise with specific (costly to transfer) knowledge	p2: "Specific knowledge is knowledge that is costly to transfer among agents and general knowledge is knowledge that is inexpensive to transmit. Because specific knowledge is costly to transfer, getting it used in decision-making requires decentralizing many decision rights"	*Supported*

Appendix B — Overview of Key Theories (68 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
Coordination and Organisational Design	**Milgrom & Roberts (1995)**	design elements are interdependent; a change in one requires adaptation of the others	p3: "'doing more of one thing increases the returns to doing more of another'"; p7: "the choice variables tend to move up or down together in a systematic, coherent fashion ... a change that favors increasing any one variable leads to increases in all the variables"	*Supported*
Coordination and Organisational Design	**Holmström (1982)**	joint output, individual contributions unobservable → free-rider	p3: "the problem of free riding when there is joint production ... agents who cheat cannot be identified if joint output is the only observable indicator of inputs"	*Supported*
Coordination and Organisational Design	**Williamson (1975)**	market transactions have costs (opportunism, bounded rationality, *asset specificity*); internal organisation can reduce them	Williamson 1975 (read): bounded rationality, opportunism, small numbers, information impactedness; "asset specificity" 0 hits (a 1979/1985 term)	**Supported (corrected Oct. 2026)**
Coordination and Organisational Design	**Williamson (1975)**	(a) transaction costs of market exchanges: opportunism, bounded rationality, small numbers	Williamson 1975 (DA re-measured: 'small numbers' 63, 'bounded rationality' 78, 'opportunism' 90 — as conditions for transaction costs, not as costs	**Supported (corrected Oct. 2026)**
Coordination and Organisational Design	**Meyer & Rowan (1977)**	formal structures are adopted for legitimacy, independently of technical efficiency	p2: "Organizations that do so increase their legitimacy and their survival prospects, independent of the immediate efficacy of the acquired practices and procedures"; p14: "Independent of their productive efficiency, organizations ... gain the legitimacy and resources needed to survive"	*Supported*
Feedback, Learning and Implementation	**Kluger & DeNisi (1996)**	131 studies; d = 0.41; 38 % of the *studies* negative effect	K&D p. 258 (DA re-measured): "over 38% of the effects were negative" — 607 effects from 131 studies	**Supported (corrected Oct. 2026)**
Feedback, Learning and Implementation	**Kotter (1996)**	eight steps (urgency, coalition, vision, communication, empowerment, short-term wins, consolidate, anchor)	ch. 2 Figure 2-2 The Eight-Stage Process — 8 steps 1:1	*Supported*
Feedback, Learning and Implementation	**Posthuma & Campion (2008)**	evidence-based best practices increase effectiveness and reduce legal risk	p1: "Employers can use a model to achieve performance reviews that increase employee satisfaction, reduce the likelihood of litigation and boost motivation"; p1: "concern is growing about legal liability"	*Supported*
Feedback, Learning and Implementation	**Peter & Hull (1969)**	promoted to the level of incompetence; performance in the current job does not predict the next	p23: "In a hierarchy every employee tends to rise to his level of incompetence"; p22: "The employee had been promoted from a position of competence to a position of incompetence"	*Supported*
AI, Technology and Algorithmic Management	**Acemoglu & Restrepo (2019)**	AI substitutes for labour in routine tasks and complements it in complex ones; the net effect depends on new tasks	p1: "automation ... enable capital to be substituted for labor in a range of tasks ... a displacement effect"; p2: "counterbalanced by technologies that create new tasks in which labor has a comparative advantage ... a reinstatement effect"; p2: "the net impact ..."	*Supported*
AI, Technology and Algorithmic Management	**Edwards (1979)**	three forms of control: simple, technical, bureaucratic	p30–32: "the system of simple control"; "Technical control emerged ... Machinery itself directed the labor process and set the pace"; "bureaucratic control, rests on the principle of embedding control in the social structure"	*Supported*
AI, Technology and Algorithmic Management	**Laibson (1997)**	hyperbolic, not exponential, discounting → time inconsistency and self-control problems	p2: "Hyperbolic discount functions induce dynamically inconsistent preferences, implying a motive for consumers to constrain their own future choices"; p9: "an exponential discount function ... constant discount rate, while the generalized hyperbolic ... instantaneous discount rate that falls as t rises"	*Supported*

Appendix D — Final Assignment (8 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
The Situation	**Kellogg et al. (2020)**	(a) Kellogg, Valentine & Christin 2020 describe algorithmic management with six control mechanisms; (b) restricting, recommending, recording, rating, replacing, rewarding	p. 366 (abstract): "algorithmic control in the workplace operates through six main mechanisms, which we call the '6 Rs'—employers can use algorithms to direct workers by restricting and recommending, evaluate workers by recording and rating, and discipline workers by replacing and rewarding"	*Supported*
The Situation	**Kellogg et al. (2020)**	(a) "Inspired by Kellogg, Valentine & Christin (2020), Academy of Management Annals"	p. 366: "Academy of Management Annals 2020, Vol. 14, No. 1, 366–410. … ALGORITHMS AT WORK: THE NEW CONTESTED TERRAIN OF CONTROL"	*Supported*
The Assignment	**Edwards (1979)**	(a) Kellogg et al. (2020) use the concept of "contested terrain"; (b) the concept comes from Edwards (1979)	Kellogg et al. p. 366: "We use Edwards' (1979) perspective of 'contested terrain,' wherein managers implement production technologies to maximize the value of labor and workers resist"; Edwards 1979 p. 16: "The labor process becomes an arena of class conflict, and the workplace becomes a contested terrain"	*Supported*
Indicative Solution Structure	**Baker et al. (1994)**	(a) BGM 1994 showed that implicit contracts are sustained by reputation and repeated interaction	p. 1127: "implicit contracts based on subjective performance assessments be enforced not by the courts but by the firm's concern for its reputation in the labor market … an implicit contract could also be called a self-enforcing contract"; p. 1134: "To formalize the role of trust in enforcing implicit contracts, we consider an infinitely repeated relationship"; p. 1130: "If the firm's discount rate is sufficiently low, then the present value of being trustworthy is large enough that an implicit contract can achieve the first-best"	*Supported*
Indicative Solution Structure	**Becker (1962)**	(a) skill types: general vs. (firm-)specific; general skills can be used in any firm; specific capital binds the employee	p. 12: "General training is useful in many firms in addition to the firm providing it"; p. 17: "Training that increases productivity more in firms providing it will be called specific training. Completely specific training can be defined as training that has no effect on the productivity of trainees that would be useful in other firms"; p. 19: "The willingness of workers or firms to pay for specific training should, therefore, closely depend on the likelihood of labor turnover"	*Supported*
Indicative Solution Structure	**Williamson (1985)**	(a) asset specificity as a concept (Williamson 1985); (b) low asset specificity ⇒ the party cannot be locked in	Baumol (1986, a review of Williamson 1985) p. 280: "These three requirements for applicability of his transactions cost analysis are asset specificity (sunk costs), limits on information and calculation ability ('bounded rationality'), and willingness to profit at the expense of others ('opportunism')"; p. 280: "If an economic activity requires no costs to be sunk in plant or individuals, so that all capital, inanimate and human, is perfectly transferable …"	*Supported*
Indicative Solution Structure	**Jensen (2003)**	(a) bonuses with caps and thresholds create gaming incentives, which Jensen (2003) warned against	p. 388: "any time managers are within shooting distance of a kink (or in general any nonlinear segment) in the pay-for-performance function, the firm is rewarding them for taking actions that are harmful"; p. 387: "the bonus increases until it is capped at some maximum … Performance above this upper limit generates no additional bonus"	*Supported*

Appendix D — Final Assignment (8 places)

Section	Source	What the book rests on the source	Evidence in the source	Status
Indicative Solution Structure	**Edwards (1979)**	(a) the contested terrain perspective (Edwards 1979; Kellogg et al. 2020); (b) algorithmic management is the old labour conflict (control vs. autonomy) by new technological means	Edwards 1979 p. 10: "continuing capital accumulation has propelled workers and their employers into virtually perpetual conflict. And while both technology … play a part in the story to come, the roots of this conflict lie in the basic arrangements of capitalist production"; p. 16: "Faced with chronic resistance … employers over the years have attempted to resolve the matter by reorganizing, indeed revolutionizing, the labor process itself … their strategies aim at establishing structures of control at work"; Kellogg et al. p. 366: "workers are individually and collectively resisting algorithmic control through a set of emerging tactics we call algoactivism"	*Supported*
